AVEPOINT MY WORLD

With massive proliferation of content, a multitude of systems to keep track of and colleagues all over the world, we struggle to remain aware of relevant topics and stay connected to people around us. Delve and the Office Graph represent huge strides in improving this condition by surfacing the most relevant content and people that we're connected to. My World (Preview) builds on this - Now you can scan personalized trending topics, review related content, and quickly find important documents that you are working on based on your priorities. Additionally, our Topic Cloud surfaces content, and documents you might be interested in and connects you to the right individuals. All of this available on mobile with a rich user interface for an engaging experience.

TECHNICAL OVERVIEW

- Support for Windows Phone 8.1 and Windows Phone 10. Additional versions and platforms to follow.

- Built as a Windows Universal Application.

- Connects to your Office 365 Tenant via secure login.

- Queries the Office Graph, via REST, on user's behalf to drive multiple experiences across the app.

- Includes Cortana integration to support multiple voice commands.

- Mine topics and content most relevant to users using "Entity Extraction". Those topics are then used to drive additional search-based insights by suggesting additional content and people.

- Entity Extraction service hosted in Windows Azure.

- Dynamic and engaging visuals help users consume content easily and connect with colleagues using a relationship trees.
