

GOVERNANCE AUTOMATION ONLINE

FOR MICROSOFT® OFFICE 365

YOUR POLICY. OUR AUTOMATION.

KEY BENEFITS

 <p>PROVISIONING</p>	 <p>LIFECYCLE MANAGEMENT</p>	 <p>SECURITY</p>
<p>Give users what they need quickly and easily while enforcing corporate policies across the organization with full transparency. Users can request Office 365 resources, including SharePoint Online sites and Office 365 Groups, through a self-service catalog of business-centric services with automated approval as well as standardized settings and configurations. Provide better service with less burden on IT.</p>	<p>Provide users with easy access to IT services while helping IT administrators effectively meet data governance needs – from setting up where your content will live, to storing it for record keeping when it’s no longer relevant and expunging at the end of your retention policy.</p>	<p>Implement a data governance strategy that protects your Office 365 data before it is even created. Set up in-policy workspaces using multi-stage approval processes with recurring permissions management reviews for maximum data security.</p> <p>Ensure compliance with corporate and industry-defined governance policies by automatically correcting unauthorized changes to features, permissions, and settings with Policy Enforcer.</p>

By providing end-users with an intuitive service catalog of all available resources, DocAve Governance Automation Online resolves ambiguity around requesting resources from IT and encourages adoption throughout the content lifecycle.

DocAve Governance Automation Online empowers users with self-service IT resources for Office 365 provisioning, moving or restructuring content, as well as lifecycle and permissions management. Transcend rigid provisioning and security management solutions with an end-user driven service integrated with DocAve Online for data protection, administration, content management, and reporting capabilities.

TECHNICAL OVERVIEW

PROVISIONING

- Automatically provision policy-based site collections, sites, lists, and libraries in SharePoint Online. With Yammer integration, Yammer groups are created with the feed embedded during site collection creation
- Create Office 365 Groups and users through business-appropriate approval processes and execute automatically upon approval
- Centralize and reuse policy definitions to enhance consistency across service requests for SharePoint Online sites and Office 365 Groups leases and inactivity with a flexible policy wizard
- Enforce corporate taxonomy with the ability to assign site collection metadata using Managed Metadata Service terms

●-○-● LIFECYCLE MANAGEMENT

- Utilize automated reports and approval processes to ask accountable business users to proactively delete or archive SharePoint Online sites and Office 365 Groups that are inactive or have pending lease expirations
- Improve transparency of content ownership by maintaining an up-to-date list of accountable business users for each site or site collection throughout its lifecycle
- Manage site collection ownership, classification, and content policy according to evolving business needs, and use the Site Lifecycle Timeline to easily review all site activity from creation
- Automate enterprise content migration and restructuring while maintaining all content, configurations, security settings, and metadata
- Provide business users with granular control over the lifecycle of their Office 365 Groups and users with multiple, automated management actions
- Assign primary and secondary business stakeholders for your SharePoint Online site collections, sites, and Office 365 Groups to enforce accountability and enable appropriate change management approvals without granting elevated levels of privilege or native SharePoint Online sites and Office 365 Groups ownership.

SECURITY

- Audit and track all requests and permissions changes across SharePoint Online sites and Office 365 Groups
- Grant, transfer, clone, or remove permissions directly or through SharePoint group membership

SHAREPOINT ONLINE INTERGATION

- Enable end users to request resources for provisioning, permissions, lifecycle, and content management directly within SharePoint Online sites without the need to sign into AvePoint Online Services
- Display associated site information such as site contact, lease quota, as well as all available services on the site home page
- Provide a visual indication of policy and service levels directly within sites
