## Archive SharePoint Content to Tiered Storage to Increase Performance and Reduce Cost

With the volume of data increasing rapidly, companies can quickly see the performance of their SharePoint environments decline, while consuming more and more valuable storage resources. Rather than add more SQL Servers or increase storage capacity, consider implementing DocAve Archiver. With DocAve Archiver, organizations can store this content outside of the database, on tiered network or cloud storage. In addition to significant savings in storage costs, seamless end-user access to archived content and improved performance increases the overall SharePoint user experience.

DocAve Archiver frees valuable space on SQL Servers by offloading content from SharePoint content databases to any local or network drive, file system, or cloud and SAN environment. Archived content remains accessible in SharePoint, and is fully indexed and searchable through SharePoint Search. With customizable archiving rules, administrators can flexibly define archive plans based on an organization's business needs and data lifecycles. DocAve Archiver also allows users to restore content back to the SQL Server content database easily – keeping intact all original metadata and security permissions, thereby ensuring that users can continue working on their content without interruption.

## Business Advantages

- **Control site and content proliferation**  
Archive entire sites, including their child nodes, or any content in those sites down to individual versions of documents. This empowers organizations to more effectively manage site and content proliferation, and employ proper data lifecycle management policies.
- **Improve SharePoint performance**  
Archiving inactive data, this helps free end-users of quota limitations, and delivers unmatched manageability and scalability.
- **Reduce storage costs**  
Offload content from SQL content databases to any local or network storage, allowing SharePoint to fully leverage tiered storage resources.
- **Maintain access to all data**  
Archiving is transparent to the user. Archived data can always be accessed by end-users from its original SharePoint location. Content can be searched for, viewed, edited, and acted upon as if it were still in SharePoint.

\*As with all AvePoint software, the DocAve Software Platform leverages only fully supported Microsoft methodologies and API's.

## Archiver – Technical Advantages

- **Archive Flexibility:** Archive any content in your SharePoint environment at any level, from an entire site collection down to specific items and versions. Archive all list, library, and item types.
- **Advanced Archiving Rules:** Intelligent rule-based archiving on content attributes such as Last Accessed/Modified Time, Size, as well as by custom-defined metadata.
- **End-User Archiving:** End-users can select content to be archived immediately, ensuring the greatest optimization of SharePoint storage.
- **Seamless Integration with SharePoint:** Archiving leverages Microsoft BLOB Storage APIs, ensuring seamless integration with SharePoint, Microsoft Office applications, and third-party products and add-ons.
- **Archive to any Storage System:** Archiver does not require any additional SQL storage for archiving. Archiver can use any local, network, or cloud storage area network or file system. With full EMC Centera storage integration, de-duplicate data and further optimize storage resources.
- **Preview Items Prior to Archiving:** View SharePoint objects covered by archiving rules, and perform test runs before executing an archive process.
- **Full-Text Search:** Archived content can be easily searched via the native SharePoint search interface and is fully accessible through SharePoint even after it has been archived.
- **Robust Data Encryption/Compression:** Archiver uses 128-bit data encryption and enterprise strength compression for efficient and secure archiving and storage optimization.

### Supported Environments

Microsoft SharePoint Server 2010

Microsoft SharePoint Foundation

Microsoft Office SharePoint Server 2007

Windows SharePoint Services v3
