

Microsoft® SharePoint® Content Management with DocAve Content Manager

Simplify the process of moving and migrating content within or across Microsoft SharePoint Server and SharePoint Online.

Key Benefits

Full Fidelity Migration

Easily copy, move, migrate, and restructure SharePoint content within or across environments, either on demand or on a schedule. Maintain list, library, configurations, and metadata integrity throughout.

Restructure Hybrid Environments

Microsoft Office 365 compatibility allows administrators to seamlessly restructure content and manage apps, workflows, and user profiles on-premises as well as within cloud and hybrid environments.

Batch Taxonomy

Tag and classify SharePoint content by updating metadata in bulk for faster organization.

Optimized User Experience

Easily respond to evolving policies and structural changes by managing enterprise content through a single, intuitive console with graphical mapping.

Restructure Enterprise-wide SharePoint Environments With Precision

DocAve Content Manager provides administrators with the ability to comprehensively move, copy, and restructure SharePoint apps, content, sites, and topology within or across environments hosted on-premises, in the cloud, or hybrid. Through a centralized, highly intuitive management console – featuring familiar ribbon-based controls and wizard-based, step-by-step guidance – administrators can easily manage and restructure SharePoint content with minimal interruption to business processes in order to quickly respond to evolving information governance requirements.

Simplified Content Management

- Manage SharePoint content within or across all SharePoint environments through a single, intuitive interface featuring familiar ribbon-based controls and wizards for step-by-step guidance
- Seamlessly copy and move content, apps, user profiles, workflows, forms, and additional features, within or across SharePoint, Office 365, and hybrid SharePoint environments
- Easily migrate content across development, staging, and production environments to reduce deployment time windows, improve IT productivity, and populate development environments with sample production content

Full Fidelity Migration

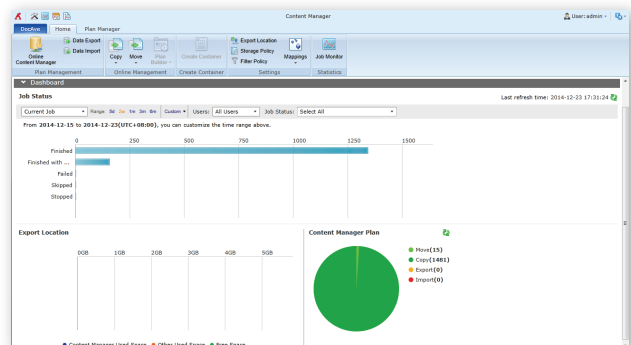

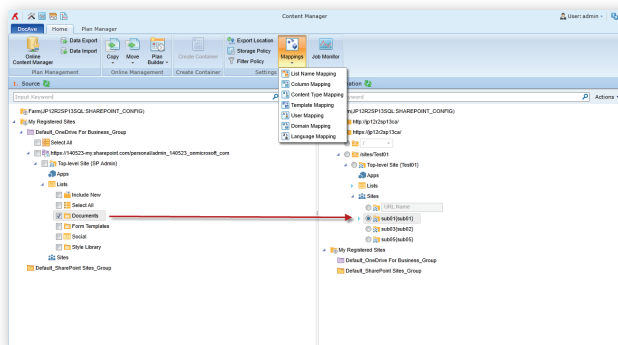

- Copy, move and restructure content to a location, server or farm with full fidelity by mapping list names, columns, content types, and templates
- Maintain list and library integrity with full support for all list types – including in-place records, document libraries, issues lists, discussion threads, and announcements – as well as content metadata and configurations
- Simplify cross-domain migration, restructuring, and reorganization by graphically mapping domains, users, and permissions, ensuring all data and metadata is maintained

Flexible Restructuring Environment

- Promote or demote sites on the fly and copy content – from list to list, library to library, or site to site – according to business requirements across multiple SharePoint environments or content databases
- Attach and merge features simplify the promotion and demotion of sites or site collections for intuitive content restructuring

Reduce Risk of Content Moves

- Back up the source or destination environment before performing a copy or move action, allowing you to rollback and restore the original data
- Receive detailed reports as soon as a job is complete, allowing you to check for and repair content that may have failed to copy or move

Seamlessly copy or move SharePoint content with full fidelity across your SharePoint environments and provide a comprehensive dashboard to monitor all content management and restructure jobs.
