

# Microsoft® SharePoint® and Office 365 Migration with DocAve eRoom Migrator

Quickly consolidate enterprise content from EMC® Documentum eRoom into Microsoft SharePoint Server and SharePoint Online.

## Key Benefits

### Pre-Migration Discovery

Inventory source environments with detailed discovery and pre-scan, to inform your migration project planning – including required mappings, prioritization, and content or customizations requiring re-work.

### Productivity Improvement

Reduce content sprawl and improve worker productivity by centralizing eRoom assets into a single SharePoint repository.

### Legacy Asset Protection

Minimize business user interruption by ensuring critical information residing in legacy content sources – including all associated metadata – is preserved and available in SharePoint or Office 365.

### Flexible Migration and Scheduling

Granular or bulk content migration as well as customizable job scheduling allows administrators to plan migration jobs according to business needs and timetables, reducing any downtime of functioning production environments.

## Migration to SharePoint Made Easy

DocAve eRoom Migrator is the market's most efficient and cost-effective solution for the transfer of collaborative workspaces and document libraries from Documentum eRoom to SharePoint Server 2016, SharePoint Server 2013, SharePoint Server 2010, Office 365, SharePoint Online and OneDrive for Business. DocAve allows IT administrators to easily automate the process of consolidating multiple eRoom content sources into SharePoint, thereby maximizing return on investment for legacy content.

## Pre-Migration

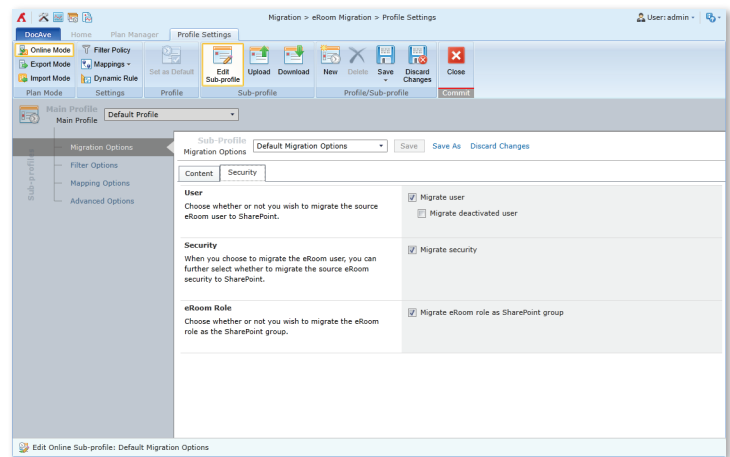

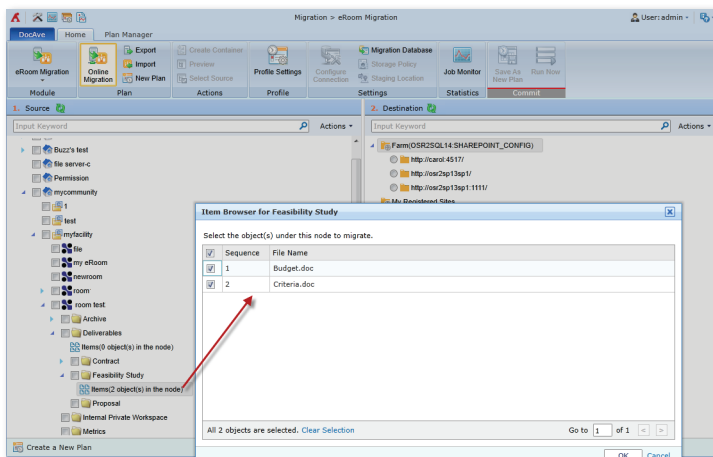

- Scan source content prior to migration to identify the scope of migration, and detect any illegal characters, user permissions, user names, user domains, and other eRoom elements that must be mapped in order to migrate successfully into SharePoint Server or Office 365
- Configure migration plans according to business needs with granular content selection, as well as customizable filtering options based on content properties, and perform test runs to validate migration plan configuration

## Migration with Full Fidelity

- Migrate archived eRoom data (.ERM files) into SharePoint in order to apply archiving or records management rules
- Preserve all metadata – including security settings, attributes, and properties – with full fidelity, utilizing customizable mappings to properly represent eRoom elements and quickly take advantage of SharePoint and Office 365's features such as managed metadata
- Perform full and subsequent incremental migrations to keep network bandwidth resources optimized, only migrating content that has been updated since the last migration
- Migrate into pre-created sites, or create sites on the fly, and reorganize folder structures after migrating to the destination libraries and record the source folder paths as column values
- Migrate online over existing networks, or offline to securely migrate data across firewalls
- Migrate into pre-created sites, or create containers on the fly

## Optimized User Experience

- Create dynamic rules based on out-of-the-box interfaces to customize mappings and filter policies in order to meet specific business needs, including the ability to create new Managed Metadata in the destination
- Delegate migration plan management based on administrative roles  
Keep source and destination environments in sync with customizable scheduling to minimize business disruption during the course of the migration project
- Prioritize existing migration plans to ensure projects are executed according to organizational timetables

*Point-and-click migration simplifies the transfer of content into SharePoint.*
