

Microsoft® SharePoint® and Office 365 Migration with DocAve Lotus Notes Migrator

Quickly consolidate enterprise content from IBM® Lotus Notes into Microsoft SharePoint Server and SharePoint Online.

Key Benefits

Pre-Migration Discovery

Inventory source environments with detailed discovery and pre-scan, to inform your migration project planning – including required mappings, prioritization, and content or customizations requiring re-work.

Effective Migration

Effectively consolidate Lotus Notes content sources into SharePoint with quick, full-fidelity migration, ensuring all migrated content looks and performs as it did in Lotus Notes.

Legacy Asset Protection

Minimize business user interruption by ensuring critical information residing in legacy content sources – including all associated metadata – is preserved and available in SharePoint or Office 365.

Flexible Migration and Scheduling

Granular or bulk content migration as well as customizable job scheduling allow administrators to plan migration jobs according to business needs and timetables, reducing any downtime of functioning production environments.

Migration to SharePoint Made Easy

DocAve Lotus Notes Migrator enables IT administrators to easily automate the process of consolidating Lotus Notes implementations into SharePoint Server 2016, SharePoint Server 2013, or SharePoint Online and OneDrive for Business with minimal impact on end-users. Organizations can gain more value from legacy Lotus Notes content by exposing it to SharePoint's powerful social collaboration, search, and document management capabilities.

Pre-migration

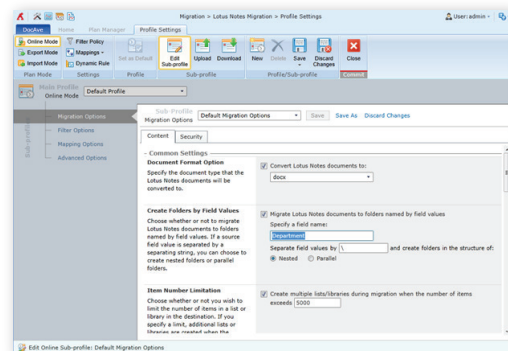

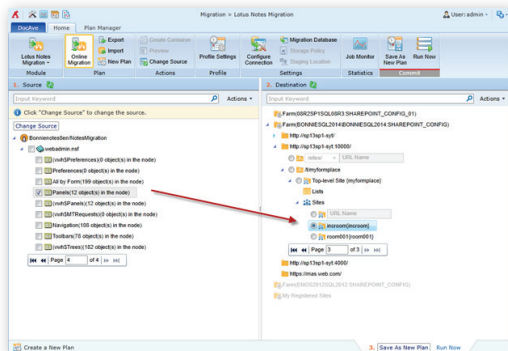

- Delegate migration plan management based on administrative roles
- Scan source content prior to migration to identify the scope of migration, and detect any illegal characters, user permissions, user names, user domains, and other Lotus Notes elements that must be mapped in order to migrate successfully into SharePoint Server, SharePoint Online or Office 365
- Selectively migrate content – including discussions, documents, memos, journal entries, team statuses, mails, individual status reports, announcements, main topics, responses, responses to responses, rules, stationaries, Lotus SmartSuites, and contacts – according to business needs with granular content selection as well as customizable filtering options based on content properties, and perform test runs to validate migration plan configurations

Migration with Full Fidelity

- Preserve all metadata – including security settings, attributes, and properties – with full fidelity, utilizing customizable mappings to properly represent Lotus Notes elements and quickly take advantage of SharePoint and Office 365's features such as Managed Metadata
- Create nested/parallel folders based on the specified field values in destination SharePoint libraries during migration
- Perform full and subsequent incremental migrations to keep network bandwidth resources optimized, only migrating content that has been updated since the last migration
- Migrate into pre-created sites, or create sites on the fly
- Migrate online over existing networks or offline to securely migrate data across firewalls
- Migrate into pre-created sites, or create containers on the fly

Optimized User Experience

- Create dynamic rules based on out-of-the-box interfaces to customize mappings and filter policies in order to meet specific business needs, including the ability to create new managed metadata in the destination
- Keep source and destination environments in sync with customizable scheduling to minimize business disruption during the course of the migration project

Point-and-click migration simplifies the transfer of content into SharePoint.
