New Features and Improvements

AvePoint Cloud Records July 2018

Release Date: July 22, 2018

- You can now review and configure approval status for objects awaiting approval directly from the Records for Review interface.

For the known issues of this release, refer to [Known Issues](#).

AvePoint Cloud Records May 2018

Release Date: May 20, 2018

- Added the **Dashboard** page to support viewing reports in different graphs based on different conditions to gain a comprehensive understanding of the records in an environment.
- AvePoint Cloud Records now supports exporting content in a format that is compliant with National Archives and Records Administration Digital Archive (NARA) standards.
- Added the Disposition Authority option into the Disposal Class to identify NRAR exports.

AvePoint Cloud Records March 2018

Release Date: March 18, 2018

- You can now modify business classifying column values for classified documents.
- You can now define how you wish to download job reports, either immediately or to a defined location.
- You can now generate a unique ID number for each classified document or item.

AvePoint Cloud Records January 2018

Release Date: January 21, 2018

- You can now remove documents and items that have been declared as SharePoint records from SharePoint Online by selecting the **Include declared records** checkbox.
- Documents can now be exported together with their columns in the format that is compliant with the National Archives of Australia (NAA).

AvePoint Cloud Records 1.0.2

Release Date: November 19, 2017

- Term display format can now be selected when configuring global settings or custom settings to classify document level objects.
- Moved documents can now be declared as SharePoint records by selecting or deselecting the **Declare each document as a SharePoint record when it is moved** checkbox.
- Terms can now be exported together with their associated rules, descriptions, and statuses by clicking the **Export Terms** link on the **Term Management** page.
- New rules can now be created to be associated with a business classification term by clicking **Create New Rule** directly from the **Term Management** page.
- The **Term Management** interface or **Location Management** interface can now display 20 items at the same level.
- You can now search for a specific site collection on the **Disposal Activity Management** page.
- You can now run disposal jobs on a child node based on its own schedule when both the child node and its parent node have schedules configured.

AvePoint Cloud Records 1.0.1

Release Date: October 22, 2017

- Support running disposal jobs based on a configured schedule.

Known Issues

Known Issues	Identified in Version	Fixed In Version
<p>If a rule is applied to a list level node, the Created By and Last Modified By column values on the Show Report page will be empty.</p> <p>Root Cause: There is no available Client API to retrieve the Created By and Last Modified By column values for list level nodes.</p>	July 2018	
<p>If a rule where manual approval is enabled is applied to a list level node, the Content Type, Created By, and Last Modified By column values on the Records for Review page will be empty.</p> <p>Root Cause: There is no available Client API to retrieve the Content Type, Created By, and Last Modified By column values for list level nodes.</p>	July 2018	
<p>On the Disposal Activity Management page, when you configure a disposal job schedule on a SharePoint Online site and then remove the SharePoint Online site from DocAve Online > Control Panel, the message displayed on the SharePoint Online site's parent node still indicates that a schedule is still configured on its child node.</p>	1.0.4	July 2018
<p>When using AvePoint Cloud Record rules to tag documents or items using custom metadata, the entered custom column name is case sensitive. However, column names in SharePoint Online are not case sensitive.</p>	1.0.0	
<p>On the SharePoint Settings page, when you configure global settings on an Office 365 group team sites group node, and then click Apply Settings to run a SharePoint Settings job, the SharePoint settings fail to be applied.</p> <p>Root Cause: To apply SharePoint settings to a SharePoint Online node, the Custom Script setting must be enabled for the SharePoint Online node. For self-service created sites or personal sites, the Custom Script setting is disabled by default.</p>	1.0.0	

<p>Workaround: The issue can be solved by enabling the Custom Script setting on the SharePoint admin center > settings page. For additional assistance contact AvePoint Technical Support.</p>
