

DocAve[®] Content Shield v2.2

For SharePoint

Release Notes

Revision A

Release Date: August 14, 2012

New Features and Enhancements

- Job Risk Reports now provide additional details around violation type and count, last modified time, and last scanned date.
- Enhanced violation detection with Discard Check Out option to allow Content Shield to block or quarantine files with violations even if the file is locked by check-out.
- Added Ignore Restored Files option to allow restored files to be skipped on future scans. When files that are covered by policies with this option enabled, authorized users may input a digital signature upon restoring files from quarantine to allow specific files with permitted violations to exist in SharePoint.
- Improved performance for memory consumption and data pruning.

Known Issues

- Real-Time Filters scan all files within configured scopes that are modified in SharePoint. In order to avoid complications, it is recommended that you do not allow files on FileShares to be accessible outside of SharePoint if the file is available in a Connector content library.
