

DocAve[®] Governance Automation Service Pack 3

Release Notes

For Microsoft[®] SharePoint[®]

Released June 25, 2013

New Features and Enhancements

New Services

- Added library/list creation to Governance Automation service catalogue.
- Added MySite creation to Governance Automation service catalogue.
- Added support for on-premises SharePoint 2013 services.

Enhancements to Existing Reports and Services

- Added support to change the site collection contact in **Change Site Collection Contact/Administrator** service.
- Added support to change site collection title, description, and metadata in **Change Site Collection Settings** service.
- Added the **Quota Template** column and the **Quota Size** column in **Site Collection Report** to display site collection quota information.

Enhancements to Managing the Platform

- Governance Automation display language can now be set via the **Language** section in the **Configure Personal Settings** interface instead of changing the browser language. Also, added French language support.
- Added support to change library/list name, description, navigation, and version settings in **Change Library/List Settings** service.
- Added **Execution Schedule** to **Settings** interface to define when Governance Automation executes service requests.
- Added the ability to complete the approval stage with one approval; this feature (**Allow the approval stage to complete when one approver approves** feature) is available if you selected the **All at once (parallel)** approval method.
- When users finish editing metadata that is applied to existing services, they can now click **Save and Update to All Applied Services** to update the modified metadata to all applicable services.
- Added support to manually enter an existing metadata term as the default value.
- Added the step bar to the configuring service interface and the **Start a Request** interface. The step bar enables users to see a process in real-time; users can go back to the previous step by clicking a step number on the step bar.
- ***Important:** The .NET Framework version must be 4.5 or above.

Known Issues

- When accessing the Governance Automation Web part using Internet Explorer, users may encounter errors. To resolve this, navigate to **Internet Options > Security tab > Trusted Sites**, and add the URL for Governance Automation to the trusted sites without the port number (for example: https://10.2.4.43).
- AvePoint does not support Governance Automation upgrades if Governance Automation is registered to multiple DocAve Managers (multiple separate installs of DocAve for managing different environments). If the **DocAve_Update_for_Governance_Automation_1.3** update does not install successfully, refer to the following two workarounds.

Workaround 1: Re-apply the update. Navigate to **DocAve Manager > Control Panel > Update Manager**, and reinstall the **DocAve_Update_for_Governance_Automation_1.3** update.

Workaround 2: Apply the update manually.

1. Extract the **DocAve_Update_for_Governance_Automation_1.3.zip** file.
2. In the **DocAve_Update_for_Governance_Automation_1.3** folder, extract the **AgentPatch.zip** file and the **ControlPath.zip** file.
3. In the node where DocAve Agent service is installed, navigate to *...AvePoint\DocAve6\Agent\bin\GovernanceAutomation* and copy the files in the **AgentPatch** folder to the **GovernanceAutomation** folder.
4. In the node where DocAve Control Service is installed, navigate to *...AvePoint\DocAve6\Manager\Control\bin\GovernanceAutomation* and copy the files in the **ControlPath** folder to the **GovernanceAutomation** folder.
5. In the node where DocAve is installed, check the status of DocAve Control Service, DocAve Agent Service, and the related application pool. Make sure that they are all started and DocAve Manager can be accessed.
6. In the node where Governance Automation is installed, check the status of Governance Automation Timer Service, Governance Automation Workflow Service, and the related application pool. Make sure that they are all started.
