

# AvePoint® & Microsoft Office 365®

## Your Avenue to Microsoft's Cloud

As businesses continue to evolve in order to keep up with today's 24/7 global markets, they seek technology that can keep up with the increasing need for mobility as well as higher service-level expectations. Cloud technologies such as Microsoft Office 365 not only provides a 99.9% uptime with global redundancy, but allows access to Microsoft SharePoint Online sites from anywhere users can access the internet.

AvePoint's cloud solutions provide trusted enterprise class data protection, content and records management, security management, and unified system administration for SharePoint through software-as-a-service (SaaS). With Microsoft Office 365 and AvePoint's cloud solutions, IT administrators can refocus resources traditionally dedicated to maintenance to improving service-level agreements (SLAs) and driving higher ROI technology initiatives.

## Key Challenges

Deploying SharePoint Online reduces startup, hardware, and software maintenance costs. However, concerns over security and configuration management, content and data protection – or even how to migrate existing content to the cloud with minimal business disruption – still persist.

Minimizing TCO	Optimizing SLAs	Ensuring Compliance
<ul style="list-style-type: none"><li>• Lowering storage costs while improving IT SLAs</li><li>• Simplifying SharePoint deployment without losing control over user and content management</li><li>• Meeting stringent business demands while enforcing effective chargeback for IT services and resources</li></ul>	<ul style="list-style-type: none"><li>• Ensuring system availability while migrating to Office 365 to avoid business disruption</li><li>• Recovering business-critical content with full metadata while meeting stringent recovery time objectives and recovery point objectives</li><li>• Simplifying content publishing and sharing without worrying about IT bottlenecks</li></ul>	<ul style="list-style-type: none"><li>• Minimizing data loss due to natural disasters and human error</li><li>• Standardizing global content and records management rules</li><li>• Minimizing security risks while simplifying access control across all Office 365 - SharePoint Online sites</li></ul>

## AvePoint® & Microsoft® Office 365®

Lowered TCO	Improved SLAs	Trusted Compliance
<ul style="list-style-type: none"><li>• Retain all metadata, configurations, and customizations, and move to SharePoint Online with confidence</li><li>• Deploy and scale SharePoint's information and storage architecture to cloud storage</li><li>• Manage multiple Office 365 - SharePoint Online instances through a single interface</li><li>• Ensure data safety with geo-redundant Azure data centers for records and backup data</li></ul>	<ul style="list-style-type: none"><li>• Minimize business disruptions with 99%+ up-time for SharePoint Online and Office 365</li><li>• Ensure content protection with full-fidelity backup plus Office 365 built-in redundancy</li><li>• Automate content publication with minimal SLAs</li><li>• Enable true global collaboration with synchronized content across geographically distributed Office 365 sites</li></ul>	<ul style="list-style-type: none"><li>• Administrative task delegation allows IT administrators to provision content without accessing sensitive information</li><li>• Content type based permissions management ensures users only have access to the right information</li><li>• Automate records retention and deletion according to industry and corporate policies</li></ul>

AvePoint's cloud solutions and Microsoft Office 365 simplify SharePoint deployment and management with no hardware setup or maintenance, and provides the on-demand scalability through SaaS. Add users and create new SharePoint Online sites as needed, and manage it all within a single interface.

Embrace the cloud without losing control over content access and structure. Seamlessly move content to SharePoint Online sites from existing SharePoint deployments. Utilize cloud-hosted SaaS solutions from AvePoint to manage Office 365 - SharePoint Online sites in order to simplify content lifecycle and records management; intranet to website publishing; and standardize information architecture, configurations and security across globally distributed environments.
