

OFFICE 365 MANAGEMENT

WITH AVEPOINT CLOUD MANAGEMENT

Manage. Don't get bogged down by Office 365 administration. Focus on making the productivity benefits of the cloud a reality.

KEY BENEFITS

REDUCE
ADMINISTRATIVE
OVERHEAD

Administrators can spend well over 35 hours a month managing basic administrative tasks. Here's how to make a positive economic impact with Office 365...

Centralize and simplify Office 365 administrative functions through a single pane of glass.

Quickly discover problems in permissions and configuration through administrative search and rapidly fix issues in bulk.

SECURITY &
POLICY
ENFORCEMENT

Ensure SharePoint Online, OneDrive for Business, and Office 365 Groups are running smoothly...

Highlight gaps between your intended governance policies and current state with a health dashboard, and resolve violations automatically through active policy enforcement.

Monitor your sites around-the-clock, report on and automatically repair unauthorized changes to security settings and configurations.

Manage permissions and share documents through an easy-to-use interface. Discover who has access to what content and easily modify, remove, promote, or copy permissions and share settings across your environment with just a few clicks.

MANAGEMENT &
RESTRUCTURING

Respond to evolving information architecture and easily scale your SharePoint Online, OneDrive for Business, and Office 365 Groups environments...

Move or copy content in bulk across Office 365 instances for tenant-to-tenant migrations or simplified internal consolidations.

Easily deploy new designs and customizations to configurations.

Publish content and synchronize changes to other instances of SharePoint Online, OneDrive for Business, or Office 365 Groups.

TAKE CONTROL OF YOUR BUSINESS DATA IN OFFICE 365

From automated policy enforcement to administration and reporting, **AvePoint Cloud Management** helps you manage Office 365 the right way. With simplified Office 365 administration, content, and security management, **AvePoint Cloud Management** enables organizations to easily extend their IT workforce. By offering content migration, audit reporting, and capabilities to restrict access to and sharing of SharePoint Online sites, Office 365 team sites, and OneDrive for Business content, **AvePoint Cloud Management** allows organizations to maintain the same level of management and control over their cloud-based assets as on-premises solutions.

AvePoint Cloud Management is a Software-as-a-Service (SaaS) offering by AvePoint, hosted on Infrastructure-as-a-Service (IaaS) offerings by Microsoft Azure.

TECHNICAL OVERVIEW

ADMINISTRATION & REPORTING

- Manage SharePoint Online, OneDrive for Business, and Office 365 Groups security settings, configurations, and content through a single platform.
- Group controls over sites and site collections with batch mode to quickly implement configurations and enforce policies in bulk.
- Allow users to search for and manage native user or group permissions, even at granular levels, directly through SharePoint Online, OneDrive for Business, and Office 365 Groups.
- Assign temporary permissions to individual users or groups within SharePoint Online, OneDrive for Business, and Office 365 Groups, and audit all administrative actions for on-demand review.
- Utilize rule-based search capabilities to quickly identify, edit, and manage SharePoint Online, Office 365 Groups, and OneDrive for Business objects.
- Report on global SharePoint Online security settings and content type usage to track unauthorized changes and take action.
- Generate audit reports for content type changes, item lifecycle, list access, list deletion, permission changes, site actions, and user lifecycle across an entire SharePoint Online, Office 365 Groups, and OneDrive for Business environment.
- Audit all user activities in SharePoint Online, Exchange Online, and Azure Active Directory (AD) through integration with the Office 365 Activity Management API.

SECURITY & PERMISSIONS

- Restrict access to, and sharing of, SharePoint Online sites, Office 365 Group team sites, and OneDrive for Business content both internally and externally.
- Monitor for and automatically adjust to unauthorized or out-of-policy changes to configurations, features, permissions, and settings while alerting administrators with out-of-the-box, configurable rules.

CONTENT MIGRATION & SYNCHRONIZATION

- Deploy design elements to Groups team sites, SharePoint Online site collections, sites, lists, folders, items, apps, site or list settings, SharePoint Designer objects, site columns, content types, user solutions, custom features, and site definitions.
- Copy, move, or restructure SharePoint Online sites, Office 365 Groups team sites, content, and topology within or across SharePoint sites while preserving associated permissions and metadata tags.
- Move content with associated metadata locally within one site collection, or consolidate multiple SharePoint Sites or Groups down to the item level across Office 365, including tenant-to-tenant migration.
- Replicate content with associated metadata locally within one site collection, or keep multiple tenants in sync down to the item level across Office 365.
- Conduct real-time replication of lists, folders, and items.
- Publish select SharePoint Online or Office 365 Groups content across sites, lists, and libraries using filtered policies based on built-in or custom metadata, such as approval status.
