

AVEPOINT COMPLIANCE GUARDIAN

FOR DATA CLASSIFICATION

STANDARDIZING CLASSIFICATION WITHOUT ALL THE WORK

KEY BENEFITS

DATA TAGGING

Automated and assisted tagging turns standard information, like ownership, geography, file location, and sensitivity level, into content property. Provides the flexibility to establish classification standards for your organization's specific needs. Involving data owners from the start makes it clear whom to contact for permissions and incident management.

DATA CLASSIFICATION

Once you understand your data, determine relevant information to attach to existing and future files and documents. Standard taxonomy and enforce classification to make it easier to manage and restructure future data and provide more details in the reports generated for your information security team.

DATA SECURITY

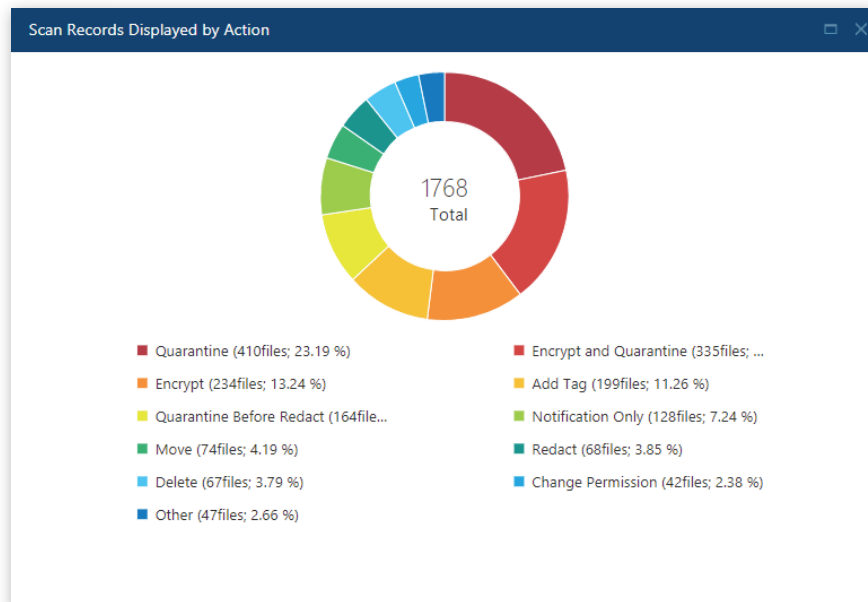

Securing your data begins with diligently tagging and classifying new data and keeping up with changes to existing data. Content-based tags with continuous monitoring will immediately identify and isolate violations in privacy and policies to protect data from inappropriate access and sensitive content.

AUTOMATED COMPLIANCE SOLUTIONS

Securing your data starts with knowing what it is first. Standardize classification by automatically tagging new and existing files based on content, context, and ownership to not only save time and IT resources, but make it possible to automatically enforce permissions and information governance.

TECHNICAL OVERVIEW

- Scan enterprise content in real time or on a schedule against out-of-the-box or customized check files – based on regulatory and statutory compliance or your own policies – that include plain text search terms, regular expressions, and report criteria
- Classify content with user-assisted or automated tagging via a Metadata Classification Engine
- Based on content classification, assign permissions; route to the appropriate location; and block, delete, quarantine, encrypt, or redact sensitive data to comply with information governance policies

Scan Records Displayed by Action

1. Name and Template | 2. Search Condition | 3. Define Result | 4. General Settings

* What kind of information do you need to check:

- Text or Keywords
- Standard Forms
- Website Settings
- Custom
