

# AVEPOINT COMPLIANCE GUARDIAN

## FOR DATA DISCOVERY

## KNOW YOUR DATA

### KEY BENEFITS

#### DATA IDENTIFICATION

Set the right level of protection for the right data with context-aware reporting, notification, and classification – preventing regulatory violations across SharePoint, file shares, databases, websites, cloud platforms including Office 365, Exchange Online, Box, and social platforms including Skype for Business and Yammer.

Real-time scans promptly and accurately identify regulated and sensitive data to mitigate harmful leaks right away.

#### SHAREPOINT ANALYSIS

Scan the content within each file to determine key information such as sensitivity level, ownership, and purpose so you can establish the right procedures for protecting and managing your SharePoint data.

As more content is created and shared, files go from critical to irrelevant. It then becomes difficult not only for users to find the information they need, but for IT and compliance teams to prevent regulatory violations as well as inappropriate access.

#### FILE ANALYSIS

Analyze and define unstructured data across multiple platforms to prioritize and declutter your data.

Identify redundant, obsolete, and trivial (ROT) data to improve performance and reduce risk.

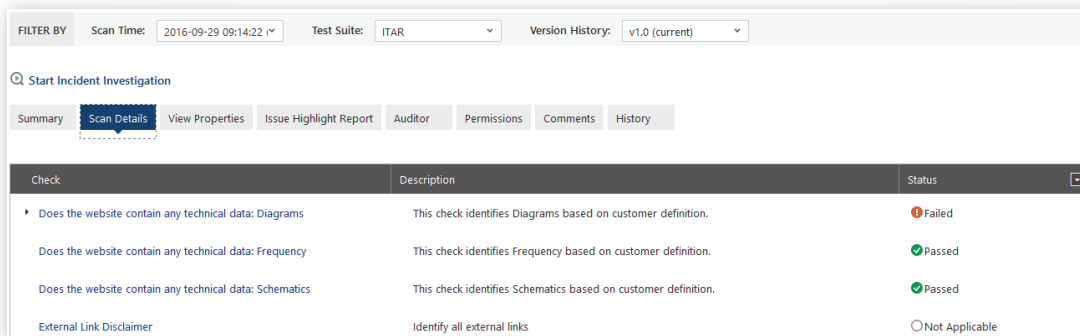

Determine service level agreements (SLAs) for backing up critical documents and establish rules for record retention to organize and optimize your data so you can get the most out of your collaboration platforms.

## FROM WHERE IT LIVES TO WHAT IT IS

Scan and analyze file metadata and its contents so you can better sort and secure each and every file, block inappropriate content, and protect your most valued assets. Continuously monitor your environment to identify and review data, and get alerted when potential violations in privacy or permissions are detected so you can resolve threats before they become costly fines.

## TECHNICAL OVERVIEW

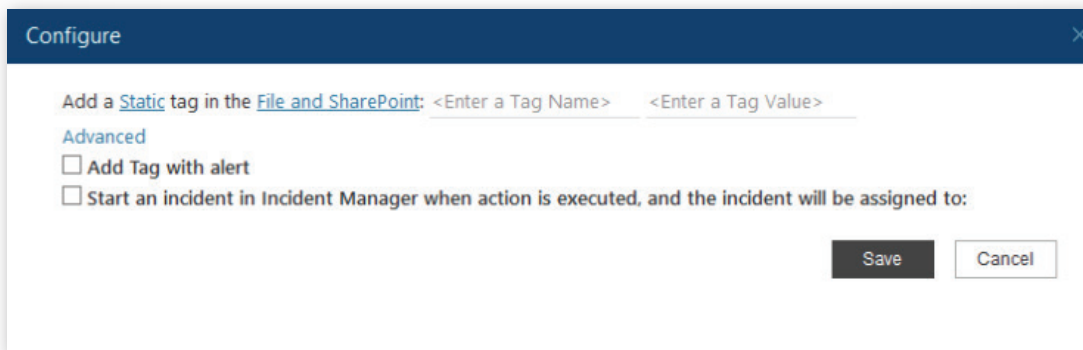

- Real-time and scheduled scans identify and analyze files and their content so you can map out data by file type, age, size, ownership, location, and sensitivity level.
- Classify content with user-assisted or automated tagging via a Metadata Classification Engine.
- Identify privacy or information security violations in files and assign by role and ownership so issues can be resolved by the right people.
- Security-trimmed and heat-mapped reports prioritize risk by criticality and concentration.
- Report on access levels to ensure the right people are able to see, edit, download, and share specific information and file types.
- File history reports show all access and modification to pinpoint leaks.

The screenshot shows the 'Scan Details' tab with a table of scan checks. The table has three columns: 'Check', 'Description', and 'Status'. The 'Status' column includes a dropdown arrow. The checks listed are:

Check	Description	Status
Does the website contain any technical data: Diagrams	This check identifies Diagrams based on customer definition.	Failed
Does the website contain any technical data: Frequency	This check identifies Frequency based on customer definition.	Passed
Does the website contain any technical data: Schematics	This check identifies Schematics based on customer definition.	Passed
External Link Disclaimer	Identify all external links	Not Applicable

*Details of a Scan Record*

The 'Configure' dialog box contains the following text and controls:

Add a **Static** tag in the **File and SharePoint**:

**Advanced**

Add Tag with alert

Start an incident in Incident Manager when action is executed, and the incident will be assigned to:

*Add Appropriate Tags to Enforce Classification*
