AVEPOINT COMPLIANCE GUARDIAN
FOR DATA DISCOVERY

KNOW YOUR DATA

KEY BENEFITS

| DATA IDENTIFICATION	SHAREPOINT ANALYSIS	FILE ANALYSIS
Set the right level of protection for the right data with context-aware reporting, notification, and classification – preventing regulatory violations across SharePoint, Exchange, file shares, databases, websites, cloud platforms including Office 365, Box, Dropbox and Slack, and social platforms including Skype for Business and Yammer. Real-time scans promptly and accurately identify regulated and sensitive data to mitigate harmful leaks right away.	Files go from critical to irrelevant as more SharePoint content is created and shared. Scan the content within each file to determine key information such as sensitivity level, ownership, and purpose. Let users easily locate info they need and your IT and compliance teams can establish the right procedures for protecting and managing SharePoint data from regulatory violations or inappropriate access.	Analyze and define unstructured data across multiple platforms to prioritize and declutter yours. Identify redundant, obsolete, and trivial (ROT) data to improve performance and reduce risk. Determine service-level agreements (SLAs) for backing up critical documents and establish rules for record retention to organize and optimize your data so you can get the most out of your collaboration platforms.

## FROM WHERE IT LIVES TO WHAT IT IS

Scan and analyze file metadata and its contents so you can better sort and secure every file, block inappropriate content, and protect your most valued assets. Continuously monitor your environment to identify and review data, and get alerted when potential violations in privacy or permissions are detected so you can resolve threats before they become costly fines.

TECHNICAL OVERVIEW

- Real-time and scheduled scans identify and analyze files and content so you can map out data upon your queries with multiple filter conditions including file type, age, size, ownership, location, and sensitivity level.

- Classify content with user-assisted or automated tagging via a Metadata Classification Engine.

- Identify privacy or information security violations in files and assign by role and ownership so issues can be resolved by the right people.

- Security-trimmed and heat-mapped reports prioritize risk by criticality and concentration.

- Report on access levels to ensure the right people can view, edit, download, and share specific information and file types.

- File history reports show all access and modification to pinpoint leaks.
