

Protect Your Content Every Step of the Way.

## Data Validation, Classification, & Protection

### Secure Sensitive Content

Discover dark data wherever it lives in your current repositories with Compliance Guardian's extensible APIs.

Scan across SharePoint, Exchange, file shares, databases, websites, and cloud platforms—including Office 365, Salesforce, ServiceNow, G-Suite, Box, Dropbox and Slack—as well as social platforms like Skype for Business, Microsoft Teams and Yammer.

### Data Leakage Prevention

Centrally monitor the status of any incident as well as its associated risk levels to ensure violations are dealt with based on criticality and time of occurrence.

With trend reports and detailed historical analysis, track and manage risk level throughout the entire lifecycle of your data.

### Role-Based "Data Driven" Incident Assignment

Map content to roles—such as creators, owners, legal teams, or user groups—specific to your organization so the right person can quickly assess and resolve violations.

By mapping content and having violations sent to designated roles or user groups, risk reports become actionable.

### Comprehensive Review Process

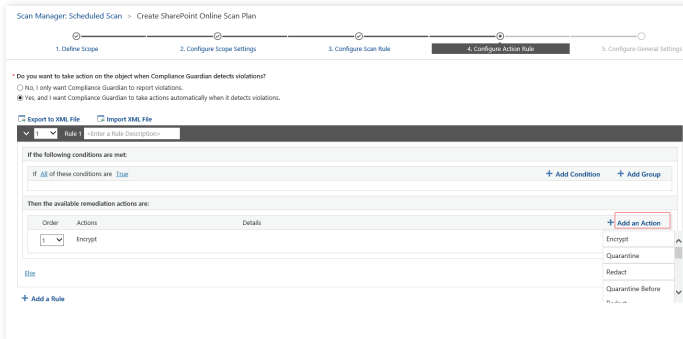

Automatically block, quarantine, redact, encrypt, delete, export, or route files containing sensitive information to an appropriate place upon upload—or during a recurring or on-demand scan.

Create alerts for the proper user or user groups to verify and confirm the appropriate action to take around incidents.

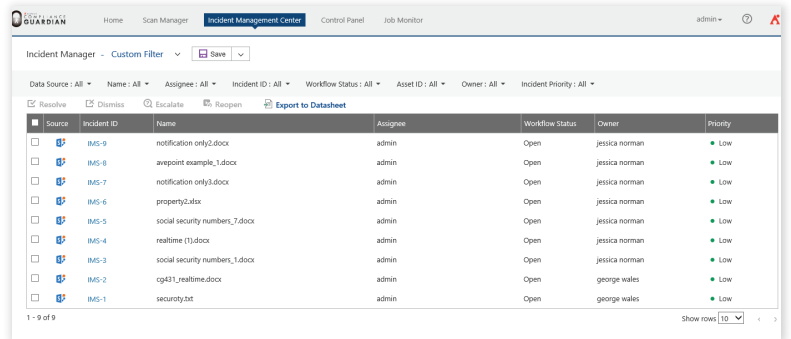

## Proactively Monitor And Secure Your Data

Identifying potential risks within your information is just the first step. Quickly and efficiently resolve issues with redaction, pseudonymization, encryption, permission management, quarantine and blocking with security-trimmed, pre-prioritized reports that guide your information owners and compliance teams to the most critical violations. By integrating content-level scans with automated actions to secure sensitive documents, update permissions, and enforce policies, we empower collaboration for end users while protecting your most valuable assets.

# TECHNICAL OVERVIEW

Policy-Driven Actions on Violations

Incident Tracking and Management

## DATA LOSS PREVENTION

- Real-time and scheduled scans identify and analyze files and their content, so you can easily map out data based on your queries with multiple filter conditions including file type, age, size, ownership, location, and sensitivity level
- Detect cryptoviruses and ransomware attacks in data sources, and review insights via a dashboard that displays potential threats, to ensure data security
- Integrate with information management policies to ensure content is appropriately stored, retained, deduplicated, and secured
- Perimeter's 'Live Preview' integration lets business users directly and securely open files in an IMS report using the URL link provided
- Delete, quarantine, encrypt, redact, anonymize, export, or route the content to the appropriate location based on its classification to comply with information governance policies

## DATA VALIDATION, CLASSIFICATION, & PROTECTION

- Real-time and scheduled scans identify and analyze files and their content, so you can easily map out data based on your queries with multiple filter conditions including file type, age, size, ownership, location, and sensitivity level

## INCIDENT MANAGEMENT

- Identify privacy and information security violations in files and assign by role and ownership so issues can be resolved by the right people
- Enhance incident tracking and management with an automated incident management system that incorporates human reviews to check status, classification results, as well as document content to enable flexible remediation and reduce false positives
- Report on access levels to ensure the right people can see, edit, download, and share specific information and file types
- Integration with Office 365 DLP aggregates incidents across systems, and automates incident management workflows to resolve violations
