

AVEPOINT COMPLIANCE GUARDIAN

FOR INCIDENT MANAGEMENT

PROTECTING YOUR CONTENT EVERY STEP OF THE WAY

KEY BENEFITS

ROLE-BASED
INCIDENT
ASSIGNMENT

Map content to roles such as creators, owners, legal teams, or user groups specific to your organization so the right person can quickly assess and resolve violations.

By mapping content and having violations sent to designated roles or user groups, risk reports become actionable.

INCIDENT
PRIORITIZATION

Sort ranked reports by a simple risk scoring system along with our visual heat maps to locate the highest concentration of violations by location and frequency so you can take action right away.

After all, not all risks are created equal.

COMPREHENSIVE
REVIEW PROCESS

Automatically block, quarantine, redact, encrypt, and delete files containing sensitive information upon upload – or during a recurring or on-demand scan.

Create alerts for the proper user or user groups to verify and confirm the appropriate action to take around incidents.

TRUST &
VERIFY

Misclassifying information can inadvertently put your data at risk. Find the right balance with human-assisted tagging verifiable by automated checks via criteria-based rules.

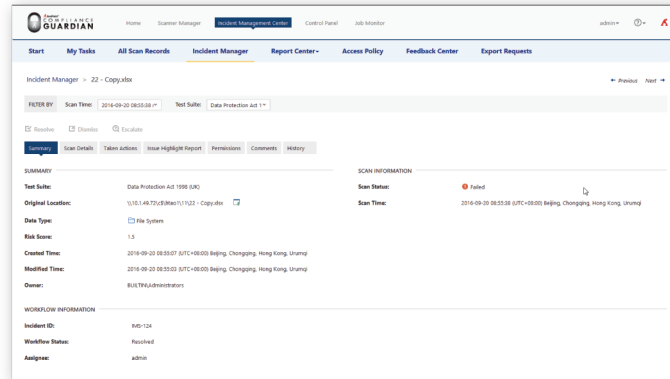

Ensure all data is correctly tagged and classified to meet the toughest of regulations.

MAKING SENSE OF YOUR RISKS SO YOU CAN TAKE ACTION

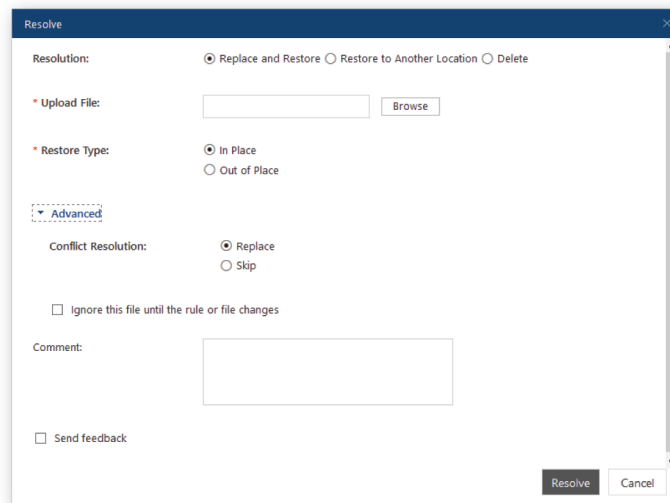

Identifying potential risks within your information is just the first step. Quickly and efficiently resolve issues with security-trimmed, pre-prioritized reports that guide your content owners and compliance teams to the most critical violations.

TECHNICAL OVERVIEW

- Based on content classification, delete, quarantine, encrypt, or route the content to the appropriate location to comply with information governance policies.
- Automatically redact sensitive or offending information exposed in content to remediate non-compliance.
- Graphically display full system scans, risk assessment, classification, and action results. Automatically input all compliance risk data and reports into HTML or Microsoft Excel files for download and reference.
- Enhance incident tracking and management with an automated incident management system that incorporates human reviews to check status, classification result, as well as document content to enable flexible remediation and reduce false positives.
