

Mitigate risk by protecting users and business critical applications.

Cloud Backup for Azure Active Directory, Virtual Machines and Blob/File Storage.

Comprehensive Backup

An unlimited backup service for your Azure VMs, Azure AD, and Azure Storage.

Recover in Minutes, Not Days

Quickly recover or export your backup data.

Worry-Free Backup

Automatic backups up to four times a day and retain 100% of your data for as long as you need.

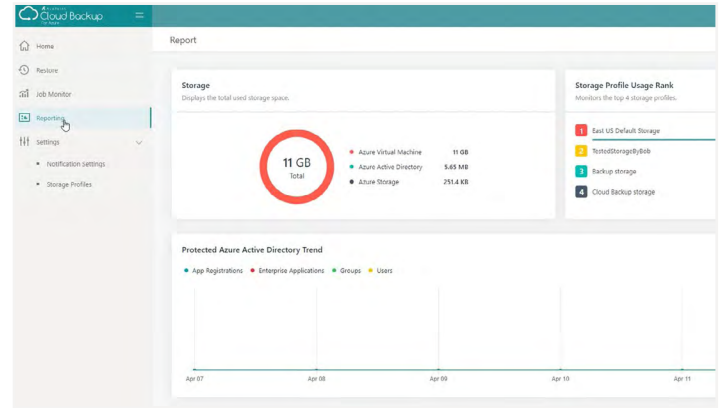

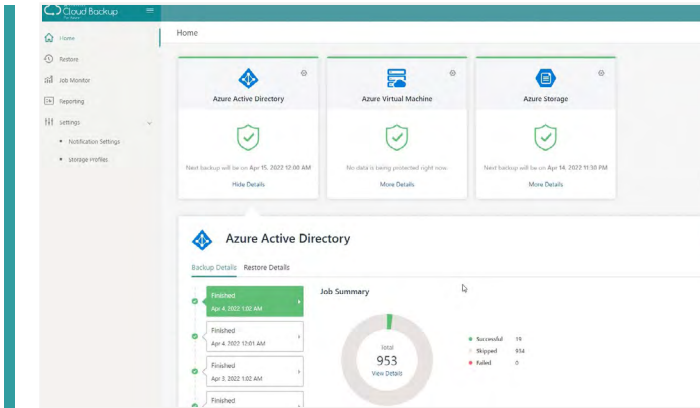

Backup on Your Terms

Choose to securely store your data in our scalable Azure Storage or your private cloud.

Incorporate Azure Backup into your disaster recovery plan.

Organizations and employees continue to navigate the shifting challenges presented by hybrid work and moving to the cloud. The productivity tools and processes intended to enhance the quality and effectiveness of collaboration may potentially introduce vulnerabilities either through human error or malicious attack. As teams continue the transformation into the Modern Workplace, organizations can mitigate risk by protecting their users and business critical applications by incorporating AvePoint's Azure backup solution into their disaster recovery plan.

COMPREHENSIVE BACKUP

- Near-zero configuration for daily backup plans up to 4 backups per day (or every 6 hours).
- Protect business critical applications, Azure Active Directory, Azure Virtual Machines and Azure Blobs/Files Storage.
- Built-in business rules and filters enable you to quickly choose which objects you want to backup.
- Store backups in our scalable Azure Storage with minimal configuration or in your own cloud.
- View information about protected Azure AD, scale of the VMs and storage in or out of protection, as well as the used space in total and in each storage profile.

GRANULAR RESTORE

- Central command dashboard that summarizes backup and restore details of latest jobs, backup scopes, and frequency.
- On-demand, granular recovery of Azure Active Directory, Azure Virtual Machines and Azure Blobs/Files Storage.
- Choose to restore the backup data to the original or an alternative location via the Export feature.
- Compare backup data with your production Azure AD. Identify any gaps or changes to quickly recover from your backups.
- Recover quickly with time-or object-based restores.
- Specify the protected VMs and confirm settings for each backup scope.
