

The Migration Expert

Take what you need, leave what you don't. We'll move your content with minimal business disruption and no data loss.

[Learn More](#)

Stop Wasting Time and Money

Migrations are complex projects. If you think you're just going to move data from one place to another, you will migrate worthless content with a high risk of failure.

Most Migrations Are Not Simple

Choosing simple tools may seem like a smart move. But, if the toolkit doesn't address all Office 365 and SharePoint migration challenges, you will fail. You will either go over time and budget or cause business disruptions.

Measure Twice, Cut Once

When done right, migration projects offer you an opportunity for positive change. The right solution handles each stage of the project – from pruning redundant content with discovery tools, to minimizing business impact with job scheduling, and finally validating the success of the project with reporting. This helps:

Your Organization
Keep your business running throughout your entire project with platform coexistence.

Security & Privacy Teams
Get the tools and insights required to assess, plan, and execute your migration projects.

IT Team
Migrate workloads within your desired timeframe and adapt to changes on the fly.

The Expert Approach

Don't just move data. Bring positive change to how you work. Refresh your business with cleaner data, smarter policies, and more effective processes.

Understand

Before your Office 365 or SharePoint migration, understand your scope, fix potential failures, and ensure every migration is fully compliant with tools to help inventory, tag, and classify content.

Discovery Tool

Report on current environment structure and content before your migration, as well as identify potential issues.

Compliance Guardian

Identify, tag, classify, or quarantine sensitive data according to organizational policies before, during, and after migration.

Move

Move to Office 365 or the latest version of SharePoint with full fidelity migrations from legacy sources, direct upgrade paths from previous versions, and seamless integration of file share networks.

Migrators

Migrate and upgrade whole farms and single files from 14+ legacy sources directly to Office 365 and the latest version of SharePoint.

High Speed Migration

Migrate terabytes of data to Office 365 from file systems, LiveLink, and SharePoint up to five times (5x) faster than previous methods.

Connector

Manage and edit file share and externally hosted content (like 10+ GB audio and video files) directly through SharePoint.

File Share Navigator

Access and download file share content (like 10+ GB audio and video files) directly through SharePoint and Office 365.

Office Connect

Allow end users to share and save content to SharePoint and Office 365 without leaving their desktop, Outlook, and Office apps.

Transform

Easily transform your structure, synchronize changes to content and settings, and automate publishing of configurations, design elements, solutions, and add-ins across any destination environment.

Content Manager

Move, copy, and restructure SharePoint content within or across environments hosted on premises, in the cloud, or hybrid.

Deployment Manager

Move SharePoint artifacts, design elements, solutions, add-ins, and configurations to production with a single click.

Replicator

Sync and publish changes to documents, libraries, and lists to keep content up to date across geographically dispersed SharePoint farms.
