

The Data Protection Expert

AvePoint provides the industry's most intelligent and versatile solutions for protecting all of your data whenever, wherever.

[Learn More](#)

Your Biggest Threat Is You.

Did you know the greatest data protection risk is an accidental internal breach? Even the best firewalls can't prevent these people-driven mishaps.

\$3.79M

Average cost of a data breach

IT pros not confident in ability to enforce policies.

IT pros agree automation is the only way to scale.

The "Least Access" Approach is Not the Answer.

Setting strict permissions may seem like the only option. However, barricading your content behind complicated processes only forces users to circumvent your security with their own solutions in order to do their jobs.

You Need an Immune System, Not a Lockbox.

Data-centric protection should complement the flow of your business. The right solution bridges the gap between organizational policies and real-world user behavior to help:

End Users

Make it easier for business users access and share data, while ensuring they do the right thing.

Security & Privacy Teams

Adapt to complex regulations and changing requirements, while ensuring your data stays in the right hands.

IT Team

Shift data protection controls to those who own the policies and content.

On-Premises

In the Cloud

File Shares

Across Platforms

The Expert Approach

Smarter Protection for Your Entire Organization. Security by design, but always with IT in mind. Making it easier to protect your data the right way.

Automate

Automate data classification and save valuable time while maintaining your data structures by enforcing from the start.

Privacy Impact Assessment (APIA)

Automate the process of evaluating, assessing, and reporting on the privacy and risk implications of your enterprise IT systems and programs.

Compliance Guardian

Identify, classify and protect data, and mitigate risk of privacy and security violations across multiple platforms.

Governance Automation

Automate policy-driven IT services to enforce taxonomy and security for SharePoint and Office 365.

Administrator

Detect and correct inappropriate changes to permissions and settings across SharePoint and Office 365.

Archiver

Create and protect immutable records with flexible retention schedules, access controls, and storage options.

Perimeter

Generate secured portals to share and collaborate on documents with external parties.

Regulate

Implement risk-based classification of new and changing content to prevent violations over time. Your users may not remember policies, but scanning tools never forget.

Compliance Guardian

Block, redact, quarantine, delete, or secure files with sensitive information from ending up in the wrong place and the wrong hands.

Governance Automation

Integrate industry and corporate policies into automated processes to enforce rules and SLAs across SharePoint and Office 365.

Administrator

Detect and correct inappropriate changes to permissions and settings across SharePoint and Office 365.

Perimeter

Secure external collaboration portals with read-only and limited time access.

DocAve eDiscovery

Respond to legal inquiries quickly with full context search and audit histories intact.

Validate

Enable continuous system validation to give yourself peace of mind while demonstrating vigilance to regulators and auditors.

Compliance Guardian

Generate detailed risk and violation audit reports with heat mapping, historical analysis, and built-in incident management.

Governance Automation

Monitor usage and consumption to determine adjustments to processes and policies across the entire organization or within a team.

Report Center

Monitor access to and usage of content and sites across Office 365 and SharePoint.
