

Microsoft® Office 365 Migration with DocAve High Speed Migration

Migrate to Office 365 at the speed of now.

Key Benefits

Migrate to Office 365 10x Faster

Whether you're migrating from legacy SharePoint versions, file shares, or Livelink, move your content to SharePoint Online and OneDrive for Business up to ten times faster using DocAve High Speed Migration.

Run Full Fidelity Migrations

DocAve's innovative data transfer is unique in its ability to granularly protect the structure, metadata, design elements, and security settings of all content for full fidelity migrations to Office 365.

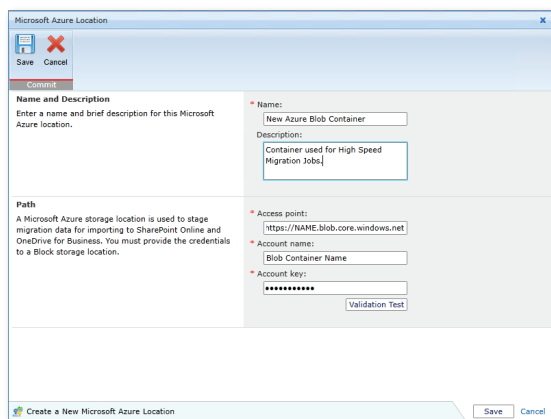

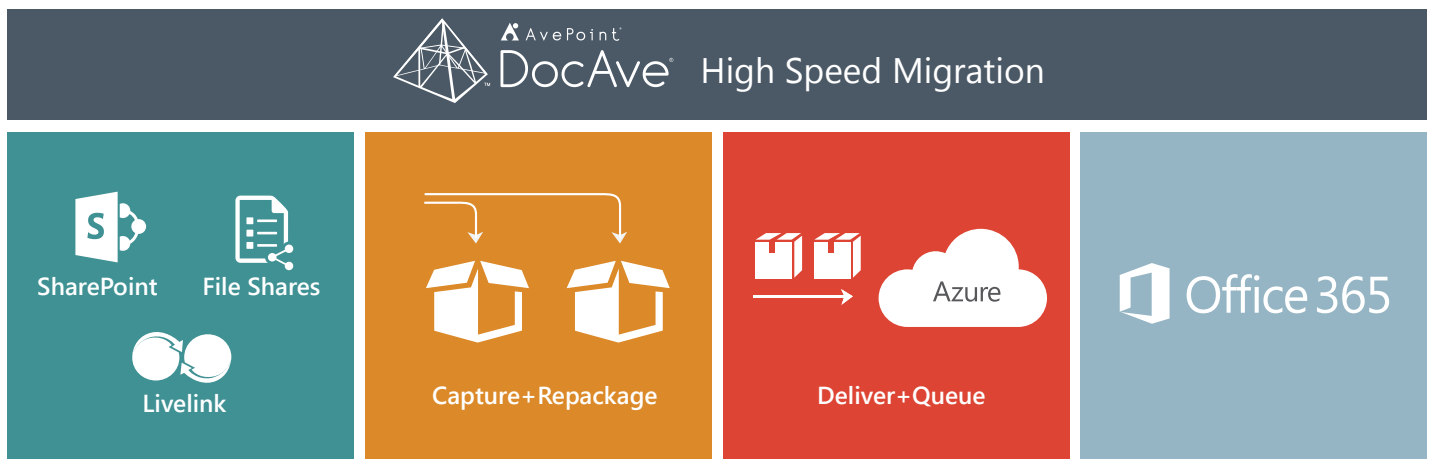

Simplify Migrations to Office 365

Set up and run a migration in just a few clicks. Select the source, content, destination location, and Azure Storage location in one simple plan. Don't have your own Azure Storage? With DocAve, automate the creation, encryption, and disposition of temporary Azure Storage at no additional cost.

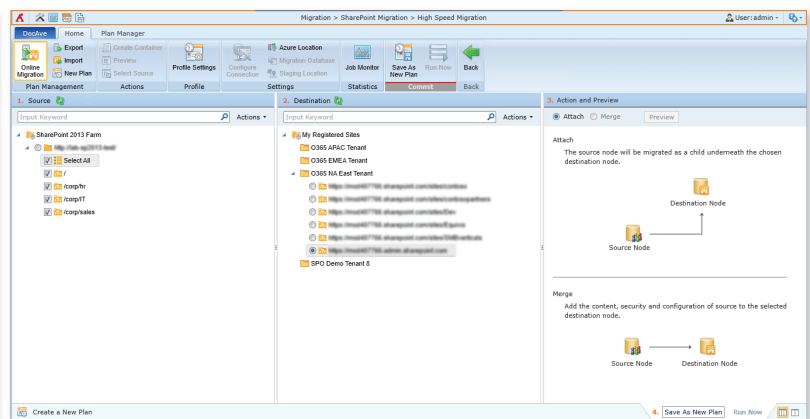

A New Approach to Office 365 Migration: Faster. Safer. More Reliable.

Using traditional methods and approaches, migrating large quantities of data to Office 365 is a complex undertaking that was not only resource intensive and risky, but could also be extremely slow due to bandwidth throttling and network latency constraints. With speeds up to ten times (10x) faster than previous methods, DocAve High Speed Migration for Office 365 allows you to say goodbye to ALL Office 365 migration roadblocks and say hello to the Microsoft Cloud!

How Does It Work on the Back End for High Speed Migration?

Online Mode High Speed Migration - Scope Selection

Create new Azure Blob Container

- DocAve Migrator backs up content off of your legacy system.
- DocAve High Speed Migration deconstructs content into smaller data migration packages in accordance with Microsoft's best practice.
- Based on the data migration packages, DocAve Migrator creates the sites and site collections in Office 365.
- The data migration package is uploaded to Azure directly from DocAve through the internet in Online Mode, or in Offline Mode through Microsoft or ISV tool, and in most cases exported drives that are physically shipped by the user to the nearest Microsoft Data Center.
- DocAve automatically provisions the free temporary Azure Storage Container for the data migration package in Online Mode. While in Offline Mode, the migration package arrives at the Azure data center and is mounted into your Azure BLOB storage location by Microsoft.
- A single command is made to Office 365 to initiate content ingestion.
- The Office 365 Migration API's import process begins to ingest, reassemble, and map content into your destination exactly where you provisioned them, with full fidelity intact.
