

SCENARIO

Bob fills out his healthcare renewal form and accidentally saves it to the partner portal he recently accessed.

Step 1: Detecting sensitive personal information through its real-time scans, AvePoint Compliance Guardian quarantines Bob's form in a secure location and notifies Bob of the incident.

Step 2: Bob locates the document in the quarantine manager and chooses to move it into a private folder within his OneDrive for Business.

Step 3: At the end of the day, Cornelius, the Compliance Officer, reviews Bob's incident within his Compliance Guardian dashboard and sees that the issue has been resolved properly.

Your Users

Continue to work the way they're accustomed to without worrying about complex data compliance and privacy policies.

Your Compliance Team

Easily monitors and remediates issues through a central dashboard.

Your Organization

Ensures compliance with data privacy and security regulations, minimizing exposure and reducing risk of costly fines.
