Step 1: Bob, your employee, is traveling and needs a document from his team site.

Step 2: Bob logs into SharePoint as usual.

Step 3: This time, Bob is sent to a page with a QR code instead. Bob scans the QR code with his registered device.

Step 4: AvePoint Perimeter checks Bob's credentials against his registered device as well as his location to verify his identity, and that he's in a region where the site's content is allowed to be viewed.

Bob
Was able to remotely access what he needed.

Your Organization
Didn't need to issue Bob a corporate-owned device.

IT Administrators
Maintained full control over the security of the accessed content.
