

AvePoint®

DocAve® Backup and Restore Granular Restore

Intro

Bob deleted a draft document from his team site. Two months later, Bob realizes he needs it.

Step 1

Bob checks the Recycle Bin. Since SharePoint only keeps deleted files for 90 days, it's not there.

Step 2

Bob contacts his SharePoint administrator, Ernie, and asks for his help.

Step 3

Ernie logs into DocAve Backup and Restore, accesses a backup from two months ago, and restores the requested draft document directly to the library in Bob's team site.

Step 4

Within minutes, Ernie lets Bob know that his document has been restored.

End Result

IT Administrators

Restore single items with full fidelity to SharePoint without staging the database.

End User

Your users can get back to work quickly.

Organization

Minimize business downtime with fast, item-level recovery of SharePoint content.
