Automated SharePoint Implementation – From Staging to Production

Effectively managing and automating change management is crucial for successfully deploying Microsoft® SharePoint®. Without proper planning or control, errors or changes during the staging process will result in increased time-to-value, project delays, and poor application reliability. DocAve Deployment Manager for SharePoint, fully supporting Microsoft SharePoint Server 2010 and Microsoft Visual Studio 2010, satisfies this business-critical demand by minimizing human error and cost overruns, accelerating service delivery, and facilitating pre-production operations for a successful SharePoint implementation.

- Efficiently and flexibly move complex server configurations and custom solutions
- Effectively clone an entire multi-tier environment for each phase of the release process
- Mitigate any risk of breakage during deployment or upgrades
- Minimize service disruption to your organization's SharePoint production environment

Business Advantages

- **Reduce Operational Costs with Automated Change Management**
Enhance IT efficiency by automating and simplifying this repetitive, time-consuming process, allowing skilled resources to focus on more strategic and higher-value activities.
- **Ensure Consistency Across all Pre-Production Environments and Production Systems**
Enable complex system changes to be systematically and accurately propagated throughout the staging environment, resulting in a consistent, dependable production system.
- **Improve Service Levels by Standardizing SharePoint and Implementation Processes**
Empower IT to improve its quality of service and responsiveness by providing greater visibility and control across diverse environments.
- **Prevent Risk and Liability by Reducing Manual Efforts and Limiting Human Error**
Automation will result in faster deployment, minimize the number of errors involved, and eliminate the possibility of breakage caused by poorly executed upgrades or change propagation.

*As with all AvePoint software, the DocAve Software Platform leverages only fully supported Microsoft methodologies and API's.

DocAve Deployment Manager – Technical Advantages

Site-Level Design Deployment

- Deploy site-level design elements from source staging environments to multiple destination environments
- Comprehensive support for deploying site columns, content types, list/site templates, master pages, Web Part Gallery, and more
- Granularly select design elements to be propagated
- Plan-based deployment, including dual-scheduling options for added flexibility

Front-End Deployment

- Deploy customized IIS settings (e.g. SSL certificates) from one environment to multiple destinations
- Replicate and deploy custom .NET assemblies required for SharePoint customizations in the Global Assembly Cache
- Replicate and deploy additional dependencies located on the front-end Web server file system

Solution Center

- Copy, deploy, retract, and delete SharePoint solutions across multiple farms from a single interface
- Graphically view the deployment status of SharePoint solutions enterprise-wide, across multiple environments
- Garner a holistic view of SharePoint solutions – along with their requisite versions – deployed across multiple farms to identify inconsistencies and possible trouble spots

Supported Environments

Microsoft SharePoint Server 2010

Microsoft SharePoint Foundation

Microsoft Office SharePoint Server 2007

Windows SharePoint Services v3
