

Enterprise Risk, Compliance, & Data Protection

Protect your unstructured and structured data—on-premises and in the cloud.

Key Benefits

Enterprise Risk Management

Implement a systematic risk program to evaluate, analyze, resolve and report on data flows, processes, and privacy and security risk. Gain insight into enterprise content with complete discovery based on common internal or external requirements. Visualize scan results in dashboards and heat maps to understand content, its risk, and inform policy planning. Automate evidence of Corrective and Preventative Actions.

Data Validation & Classification

Conduct in-depth content analysis and implement organizational taxonomy or tagging policies. Scan content, attributes, even headers and footers against common regulatory requirements or sensitive data definitions. Automate content classification and tagging to ensure metadata aligns to sensitivity or purpose to comply with internal guidelines or external regulations.

Data Protection & Incident Management

Protect your brand and information with automated actions to move, delete, secure, pseudonymize, quarantine, redact, export, or encrypt content. Define and implement information management policies based on scan results and priorities. Smart incident management provides evidence of investigations, resolution, and escalation across aggregated events—and workflow ensures swift resolution.

Protect Your Data – at Rest or in Motion – in Real Time

With all-in-one scanning, reporting, and built-in issues resolution, AvePoint Compliance Guardian proactively monitors and neutralizes violations of privacy, security, and compliance to help you mitigate risk from the moment data is created, throughout its entire lifecycle. Bring automation to your privacy and security programs across your enterprise content—whether they live on-premise or in cloud environments. Satisfy internal or external requirements and standards, such as ISO or GDPR, for information management and data governance!

Enterprise Risk Management

- Register a data inventory of your choice to understand what kind of sensitive data you hold and how the systems you use will collect and protect that data.
- Establish and visualize many-to-many associations between multiple stakeholders via easily digestible data map and data flows.
- Recommend and document appropriate Corrective and Preventive Action (CAPA) once any non-conformities or other undesirable situations are identified from assessments.
- Provide executive reports on Key Performance Indicators (KPIs), Key Control Indicators (KCI), or Key Risk Indicators (KRI) to highlight areas in the organization that need to be addressed to reduce risk.
- Schedule discovery as often as every 15 minutes to gain insight into at-risk content or controls. Check for common sensitive data definitions – including PII.

Data Validation & Classification

- Scan enterprise content in real time or on a schedule against out-of-the-box check files that map to common internal or external regulations—or build your own!
- Scan file shares, Dropbox, Box, Slack, Office 365, SharePoint, Databases and more. Wherever your content lives—it's protected.

- Generate security-trimmed reports prioritized by criticality and concentration via risk heat mapping so that the right people receive the right information and can act immediately.
- Tag or classify content using built-in properties, or assigning custom tags that will help you sort, clean, or migrate data.

Data Protection & Incident Management

- Scheduled scans run scheduled up to every 15 minutes, and real-time controls can catch and act on offending content as it's uploaded or created.
- Role-based incident management maps content to roles—such as content creators, owners, compliance and legal teams, or user groups specific to your organization—and automatically sends violations, from Compliance Guardian or Office 365 DLP, to assigned personnel.
- Protect your brand and information by defining and automating your data protection policies, including actions to move, delete, pseudonymize, quarantine, redact, export, or encrypt content.
- Integrate with information management policies to ensure content is appropriately stored, retained, deduplicated, and secured.
