

AvePoint's DocAve Replicator for SharePoint Delivers Beta Support for SharePoint 2010

DocAve enables real-time, bi-directional synchronization of SharePoint 2010 content and farms

Jersey City, NJ — March 16, 2010 — AvePoint, the leading provider of infrastructure management software solutions for Microsoft SharePoint, today announced that its DocAve Replicator tool now provides beta support for SharePoint 2010. DocAve Replicator for SharePoint is one of 24 tools available within the recently released DocAve Software Platform v5.4, and delivers real-time one-way, two-way, and one-to-many synchronization of SharePoint content and farms.

"Delivering enterprise content to geographically distributed end-users in a timely and efficient manner is absolutely critical in today's business environment", said Dr. Tianyi (TJ) Jiang, AvePoint's Chief Operating Officer. "SharePoint is the premiere information management platform for the modern enterprise, but natively it does not enable the synchronization of data. With the latest release of DocAve, we are very pleased to offer this important functionality to organizations leveraging either SharePoint 2007 or the latest RC build of SharePoint 2010."

DocAve Replicator was designed to empower organizations to efficiently synchronize SharePoint content and configurations within and across SharePoint farms, even across intermittent and unreliable networks. As organizations consider scaling out their SharePoint deployments to manage more mission-critical productivity tasks, DocAve Replicator ensures up-to-the minute data access to geographically distributed end users, with the following features:

- Live, one and two-way, event-driven and scheduled replication of SharePoint content and configurations;
- Granular synchronization of configurations, content, and securities from a single location to multiple destinations, granularly or in bulk, either within the same farm or across farms;
- Flexible options to control replication activities and network traffic, enabling efficient SharePoint replication even over slow and unreliable networks;
- One-way and two-way offline replication, enabling organizations to physically move data from one location to another when network connectivity does not exist.

To learn more about DocAve Replicator, or any of the other DocAve modules available to protect, manage, optimize, and integrate SharePoint 2007 and 2010 environments, please visit the AvePoint website at www.avepoint.com

Participation in the DocAve Software Platform v5.4 Beta-Release

The beta-release of DocAve v5.4 is available to organizations across all verticals and geographic regions, and will be followed by a GA release upon the GA release of SharePoint 2010. To request a free, fully enabled 30-day trial of the beta-version of the DocAve Software Platform v5.4, please visit <http://www.avepoint.com/resources/free-trial-downloads/>
