

AvePoint Privacy Impact Assessment 1

Release Notes

Service Pack 1, Cumulative Update 1

Issued March 2016

New Features and Improvements

- Now supports Windows 10.
- Various minor bug fixes and general back end improvements.

Known Issues

- Users cannot change the IIS website if an APIA project is currently running. If a user needs to change the website, use the AvePoint Privacy Impact Assessment Configuration Tool to assign the desired IIS website, save the project as a new project, and then run the project.
- If a user installed AvePoint Privacy Impact Assessment with a built-in database, a SQL Server instance is also created. If the user later uninstalls the product, the built-in database and SQL Server instance are not uninstalled and must be removed separately.
