

Compliance Guardian 4

Release Notes

Service Pack 2, Cumulative Update 1

June 2017

New Features and Improvements

- Compliance Guardian can now be integrated with Perimeter in order to scan and handle Perimeter data.
- the **Apply RMS Protection** action has been added for both SharePoint Online and Box; the **Change Permission** action has been added for Box; additional functionality has been added for the **Change Permission** action for SharePoint Online.
- You can now add values to the database by the **Add Tag** action in File System Scans. This enables more extensible data mapping and discovery, data movement and also further supports integration with DocAve products.

Known Issues

- In Compliance Guardian NLB environments, when the IIS Site certificate on each of the Compliance Guardian managers is different and the NLB filtering mode is **No Affinity**, there will be display issues on the Compliance Guardian Manager login page.
Workaround: Make sure that Compliance Guardian uses the same IIS Site certificate for all of the managers or change the NLB filtering mode to **Single Affinity**.
- After updating scan plans that contain custom actions from Compliance Guardian 4 SP1 to Compliance Guardian 4 SP2, the plan does not work and the job will fail. The interface of custom action has been changed, which causes the previous version's dll file to not operate correctly.
Workaround: Review any previous patches that include custom actions prior to upgrading to make sure those patches are included are included.
- When the Exchange Online license expires in Office 365, Compliance Guardian can still scan its mailboxes for 30 days. Compliance Guardian will remove Exchange Online from the scan scope 30 days after the expiration.
- Compliance Guardian cannot scan Reference attachments in Exchange Online.
Root Cause: It is an API limitation that the API cannot get the Reference attachment.
