

Compliance Guardian 4

Release Notes

Service Pack 3, Cumulative Update 1

Release Date: May 2018

New Features and Improvements

- The **Priority** column was added to assist with distinguishing between incidents. You can filter incidents on one or more priority level based on the **Incident Priority** filter in **Incident Manager**, and **My Tasks > Show All**. Added the **Incident Priority** dashboard to show the incidents based on priority levels in **Dashboard**.
- Redesigned the **Office 365 Connection** in **Connection Manager**. The **Use Office 365 Azure AD App** was now made optional for the SharePoint Online data source and required for the Exchange Online data source. Added an additional way to scan incremental data of SharePoint Online with the **Do you want to use Office 365 Management Activity API to scan the incremental data of SharePoint Online** option.
- Improved the storage logic for File System data sources for improved incremental scan performance. The feature is controlled by the **FileSystemIncTableMode** node in the **ComplianceSetting.config** file residing in ...*Compliance Guardian 4\Manager\Control\Config*.
- The connection string **Database Configuration** can now be used for creating a database in **Database Manager**.
- SharePoint Online real-time rules can now be triggered by using either the Management Activity API or the Remote Event Receiver.
- Added multiple options to detail the types of violations and exceptions of files that you want to rescan when performing an incremental scan job.
- Added the **Export** action for SharePoint Online to export the matched files and the metadata file of matched files.
- Added the **Export** action for SharePoint On-Premises to export the matched files and the metadata file of matched files.
- Improved efficiency during File System data discovery so that Compliance Guardian can handle unevenly distributed File System sub jobs by integrating with Redis servers.
- Added support to leverage SharePoint and SharePoint Online index queries to quickly identify objects to work on.
- The **Classification Code** is now displayed on the **Summary** page of a detailed scan record.

Known Issues

- In Compliance Guardian NLB environments, when the IIS Site certificate on each of the Compliance Guardian managers is different and the NLB filtering mode is No Affinity, there will be display issues on the Compliance Guardian Manager login page.

Workaround: Make sure that Compliance Guardian uses the same IIS Site certificate for all of the managers or change the NLB filtering mode to **Single Affinity**.

- After updating scan plans that contain custom actions from Compliance Guardian 4 SP1 to Compliance Guardian 4 SP2, the plan does not work and the job will fail. The interface of custom action has been changed, which causes the previous version's dll file to not operate correctly.

Workaround: Contact AvePoint and AvePoint will provide a hotfix to rebuild the custom action dlls.

- When the Exchange Online license expires in Office 365, Compliance Guardian can still scan its mailboxes for 30 days. Compliance Guardian will remove Exchange Online from the scan scope 30 days after the expiration.
- Compliance Guardian cannot scan Reference attachments in Exchange Online.

Root Cause: It is an API limitation that the API cannot get the Reference attachment.
