

DocAve Software Platform

v5.8.1.0

Release Notes

For Microsoft SharePoint

Release Date: April 2013

New Features and Improvements

Platform

- All of DocAve 5 products now fully support SQL Server 2012 except that Platform Backup and Restore does not support the backup and restore for the databases included in the SQL Server 2012 AlwaysOn Availability Group.
- DocAve Manager and Agent can be installed on a Windows Server 2012 environment.
- DocAve 5.8.1.0 Manager databases (including Control database, Auditor database, and Report database) are now compatible with SQL Server 2012.

High Availability

- Log Shipping and SQL Mirroring now support SQL Server 2012.

Auditor

- Auditor database and Report database are now compatible with SQL Server 2012.

Known Issues

High Availability

- If a job fails as a result of one or more High Availability Agents having no license, the job report and log do not list the reason for the failed job.
- After upgrading MOSS 2007 to SharePoint 2010, High Availability plans created in a MOSS 2007 environment cannot be loaded into the High Availability\Rule Builder interface.

Granular Backup and Restore

- If Advanced Search **Type** is **File Attribute** and the **Criteria** includes a \, executing the search results in a grayed-out interface and no search results.

Workaround: In the **Criteria** field, this issue can be solved if you replace \ with \\.

SiteBin

- After a SiteBin license has expired, SiteBin backup jobs can still be triggered by deleting site collections or sites in SharePoint. However, only sites can be backed up; site collections cannot be normally backed up and the site collection and site backup data cannot be restored.

Workaround: Delete the SiteBin solution from SharePoint. SiteBin backup jobs will not be triggered after the SiteBin license expires.

Archiver

- If a Display Name includes a colon (:) in the End User Archiver configuration file, the End User Archiver action will not execute.
- If configuring both TSM and NetShare as logical devices for End User Archiving, only TSM data will be restored.
- Archiver jobs fail after performing an Archive job using an unavailable Cloud Storage type logical device and then editing the plan to use another available Cloud Storage type logical device.

Workaround: Change the logical device to an available one. Then, restart the Media Service and run the job again. The job will run successfully.

Connector

- Users who have **Add Items** permission (or lower) cannot upload a large file using the **Upload Large Document** method in SharePoint.

Workaround: Granting the users **Add and Customize Pages** permission (or higher) enables the large file to be uploaded.

Restore from SQL

- In SharePoint 2007 and SharePoint 2010 environments, files backed up by Data Protection Manager 2007 cannot be analyzed by DocAve and the Analyze SQL Backup job will fail.
