

# Release Notes

**Product: DocAve® 4.5.4.0**

**Release Date: Nov. 3<sup>rd</sup>, 2008**

**Package List:** Full Packages and Patch Packages (Manager and Agent)

## Improvements and New Features

### Data Protection

- **Support for IIS added**

DocAve's Platform Level Backup solution now supports IIS version 7.

### General

- **Support for Internet Explorer**

The DocAve 4.5 GUI is now compatible with Internet Explorer 8.

- **Support for .NET Framework**

DocAve is compatible with .NET Framework version 3.5 service pack 1, as well as all future versions of Framework.

## Bug Fixes

### Data Protection

- **Support for Custom Images and Templates Created with FrontPage**

In-place and out-of-place restores were not able to capture certain images and templates created with FrontPage. Support for this product has been broadened.

- **Remaining Files After Pruning**

Some scheduled pruning cycles were unsuccessful in cleaning the index of the original backups. This has been resolved.

- **GUI Error when Restoring Granular Permissions**

In a few environments, unchecking items and performing a restore would still restore the un-checked contents.

### Migration

- **Check-out for Excel Files**

After using the SharePoint migrator from 2003 to 2007, the excel files in some environments could not be checked out, quoting an invalid filename or non-existent files and folders.

- **Bugs when Migrating Discussion Lists**

Some discussion lists could not accept new entries or replies to existing subjects after performing a migration.

- **Support for Migration from Workspaces**

Support has been enhanced for migrating Workspaces to SharePoint 2007.

## **General**

- **Job Monitors / Schedule Job Monitor in Administrator**

Occasionally, the job monitor for the Administration module would appear distorted or extend beyond the boundaries of the GUI on loading.
