

AvePoint Migration Solution for Microsoft® SharePoint and Office 365

What do you need to take with you?

How do you get there?

What should you do after migrating?

More organizations are consolidating enterprise-wide assets into a single collaboration platform to drive efficiency through improved communication and content lifecycle management. Transferring mission-critical data from legacy repositories, however, can be a challenge due to a lack of out-of-the-box migration capabilities to determine what content is relevant, effectively allocate the resources required to perform the migration, and organize the content after the migration is complete.

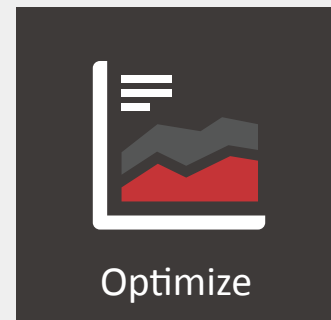

Key Challenges

How do I **assess** my existing content to understand its value, risk, and information management requirements prior to migration?

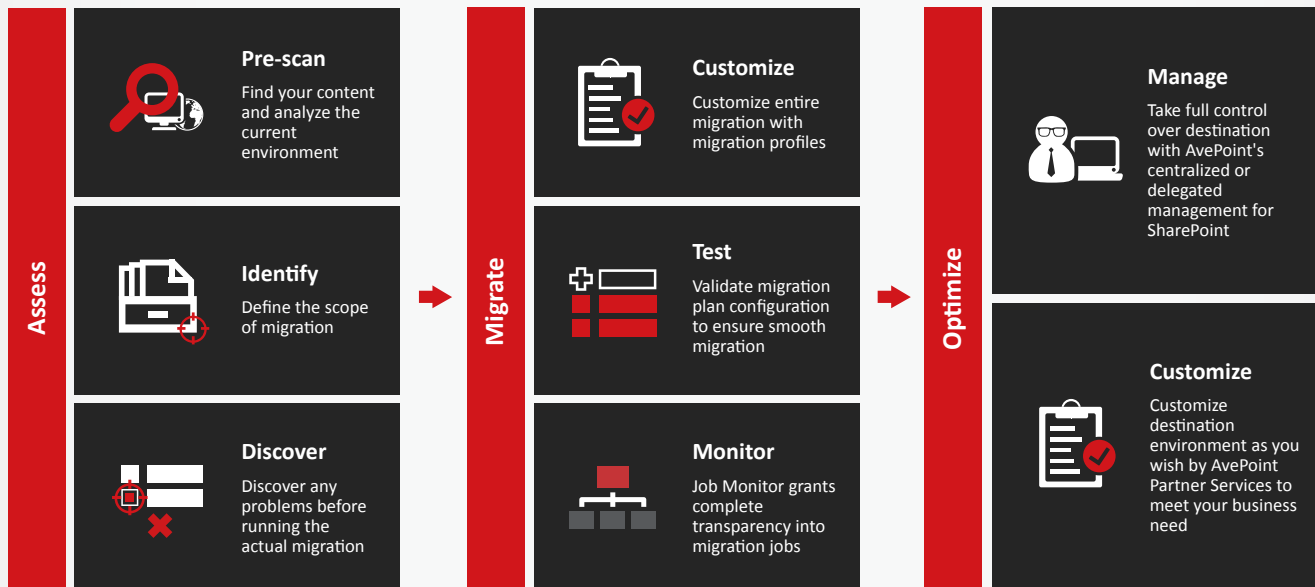

How do I ensure a successful **migration** that preserves and appropriately represents my legacy data in Microsoft SharePoint?

How can I ensure SharePoint remains **optimized** for my content management initiatives as my business needs evolve?

AvePoint Migration Solution for SharePoint and Office 365

AvePoint offers a truly comprehensive solution to help organizations accelerate the deployment of SharePoint – whether hosted on premises, in your private cloud, or in Office 365 – as the central repository for all enterprise content. AvePoint migration solutions help organizations automate the consolidation of data from more than 14 legacy repositories while maintaining all critical metadata and minimizing business disruption.

AvePoint provides organizations with robust capabilities to tailor migration projects to meet unique business needs. Administrators can choose to configure highly customizable mapping options to align migration projects with organizational timetables, migrate content in real-time without locking content databases for on-the-fly data transfers, or support platform co-existence during the course of the migration project to minimize business interruption.
