

# Office 365 Backup and Restore with AvePoint Cloud Backup

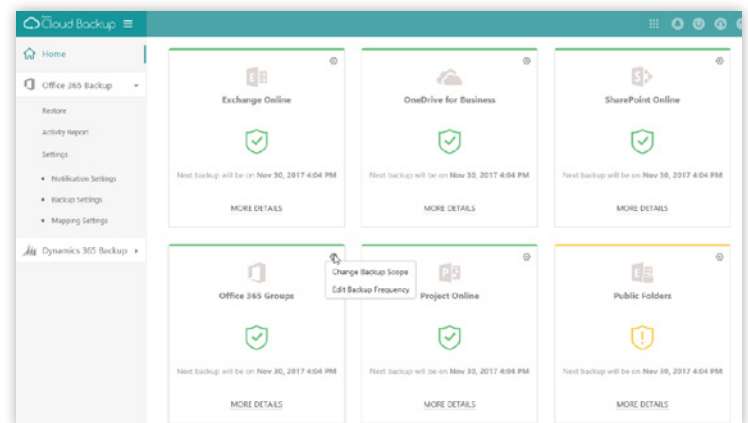

Your Cloud. Our SaaS. All-around Protection for Your Office 365 Assets.

## Comprehensive Backup

- **Platform Protection** – Unlimited backup of content in Office 365—including Exchange Online, SharePoint Online, Project Online, OneDrive for Business, Office 365 Groups and Public Folders.
- **Automatic Backup** – Your environment is protected from the moment you activate the product. Robust capacity options ensure your backup process starts automatically and runs up to four times a day (or every 6 hours).
- **Scheduled Backup** – Offer options to lower the backup frequency and set the time for the first backup at your own discretion, giving you more control over the scheduled change windows throughout the day.
- **Storage on Your Terms** – Store backups in our scalable Azure Storage or any data center of your choice with support for Microsoft Azure, Amazon S3, Dropbox, and any data destination accessible via Secure File Transfer Protocol (SFTP) and File Transfer Protocol (FTP).

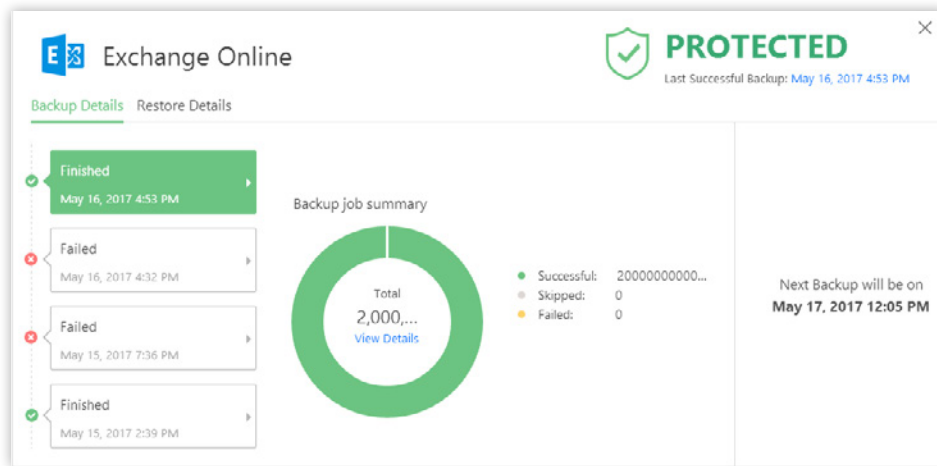

Set up Storage on Your Terms

One Platform for all Office 365 Services

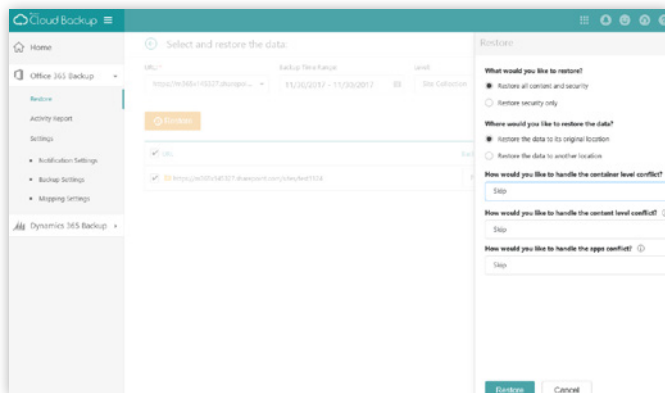

- **Backup Configuration** – Near-zero configuration for daily backup plans. Specify the scope you want to protect, and we'll handle the rest.
- **Backup Status** – Have a full view of your protection across Exchange Online, SharePoint Online, Project Online, OneDrive for Business, Office 365 Groups and Public Folders, all in one platform.
- **Backup Overview** – View details of the four most recent backups via an easy-to-read report dashboard including job status, time finished, total number of successful/failed/slipped items, and suggestions for how to remediate issues.
- **Retention Policies** – Leverage long-term retention policies out-of-the-box to preserve data based on your corporate policies.

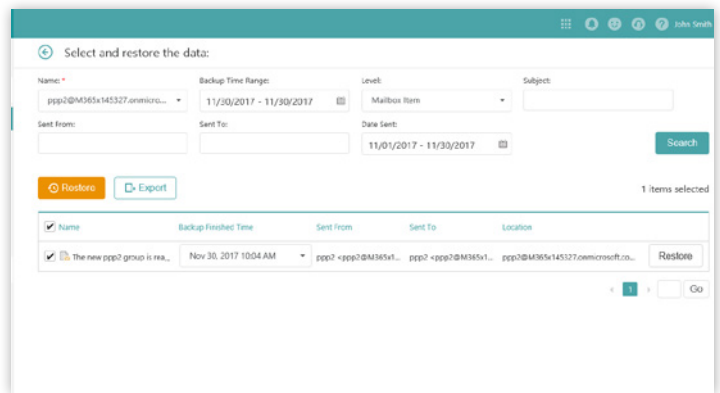

View Details for all Backup Plans

## Powerful Data Recovery

- **Granular & Full-Fidelity Restore** – On-demand, granular recovery of Office 365 content – including mailboxes, conversations, projects, tasks, calendars, sites, libraries, files, and Groups – to the online or offline storage location of your choice while maintaining all metadata and permissions.
- **Out-of-Place Restore** – Restore content and conversations to mailboxes, sites, OneDrive or Groups – not just its original home.
- **Offline Restore** – Export files, mail items, or conversations directly to a local storage, allowing you to access data immediately or maintain an offline copy.
- **Security Rollback** – Granular restore doesn't just mean an individual document or version—perform security roll-backs to undo unintended permissions changes.

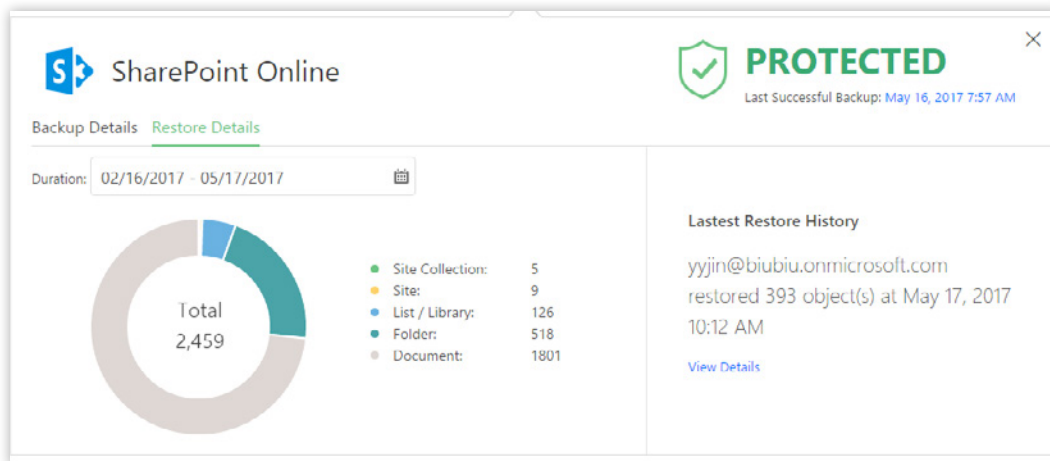

Multiple Restore Options

Simple Search

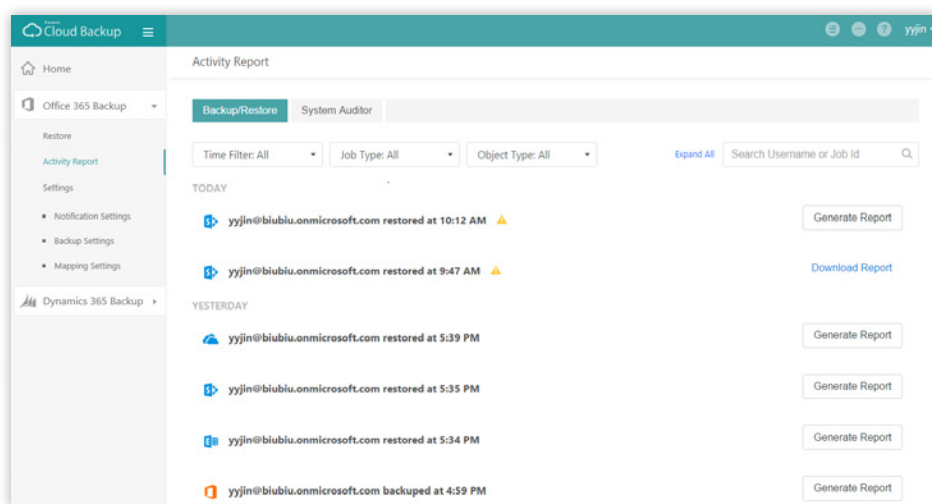

- **Simple Search** – Quickly identify content for restore based on properties—including content type, owner, date created, file size, parent list name, parent folder name, email subject, date sent, and more.
- **Object-based Restore** – Directly locate business-critical files or emails by utilizing the full-text search capability for rapid discovery.
- **Time-based Restore** – Recover quickly with time-based restores using a simple and intuitive calendar interface.
- **Restoration Overview** – Review restoration details during a specific period via an intuitive circle chart report.

View Restore Details

## Centralized Management

- **Job Monitoring** – Track, manage, and report on all backup and restore processes through a centralized management console to monitor and enforce compliance with Office 365 policies.
- **User Activity Auditing** – Gain full visibility of how your backup and restore service is being used by auditing user actions, such as changing backup scope, altering system settings, or downloading a report.
- **Email Notification** – Receive advanced email notifications with a detailed summary of backup and recovery information.
