## Overview

Minimize the time and effort required to migrate enterprise-wide content to SharePoint by utilizing DocAve's seamless, fully mapped transfer of content from more than 14 legacy systems to SharePoint 2019, 2016, 2013 or 2010—on-premises or Online editions.

### DocAve Migrators provide enterprises with:

#### Security Trimming

---

- Delegate migration plan management based on administrative role
- Empower eligible users to perform migration within allowed scope

#### Source Content Pre-scan

---

- Scan source content prior to migration to identify the scope of migration, and detect any illegal characters, user permissions, user names, user domains, as well as other elements that must be mapped in order to migrate successfully into SharePoint Server or SharePoint Online

#### Customizable and Reusable Migration Plans

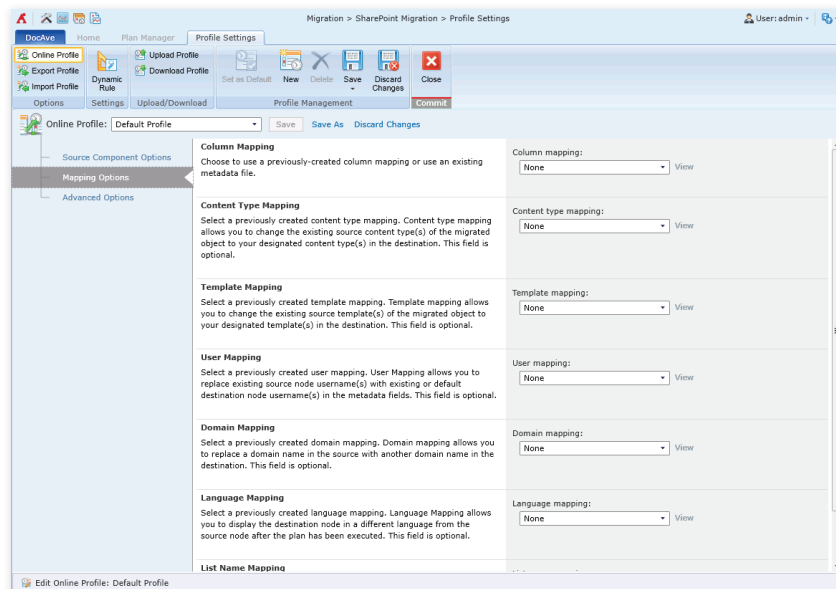

---

- Migrate content according to business needs with granular content selection and customizable filtering options based on content properties or item counts in a list, and perform test runs to validate migration plan configuration
- Migrate into pre-created sites, or create sites on the fly
- Provide dynamic rule creation based on out-of-the-box interfaces to customize mappings and filter policies that meet specific business needs, including creating new managed metadata in the destination
- Save reusable profiles for commonly used migration settings
- Prioritize existing migration plans to ensure projects are executed according to organizational timetables

#### Migration with Full Fidelity

---

- Preserve all metadata – including security settings, attributes, and properties – with full fidelity, utilizing customizable and extensible mappings to properly represent legacy elements and quickly take advantage of SharePoint's features
- Migrate workflows – including those created with SharePoint native functionality, SharePoint Designer, and Nintex – to SharePoint Server 2019, SharePoint 2016, SharePoint 2013, and Office 365 – SharePoint Online
- Migrate actions – including user alerts, views, customized forms, Nintex forms, and InfoPath forms – to SharePoint Server 2019, SharePoint 2016, SharePoint 2013, and Office 365 – SharePoint Online

*Comprehensive Mappings*

## High Speed Migration

- Combine Microsoft SharePoint Online Migration API with DocAve Migrators and accelerate the transition to Office 365 up to ten times (10x) faster than before
- Perform multi-thread content uploads directly to Azure with DocAve High Speed Migration for Office 365
- Bring your own Azure storage, or let DocAve automate the creation, encryption, and disposition of temporary Azure storage required for High Speed Migration at no extra cost

## Full or Incremental Migration

- Perform full and subsequent incremental migrations to optimize network bandwidth resources by only migrating content updated since the last migration
- Repair failed jobs through incremental migrations, saving time and resources that would otherwise be spent on repeating the entire project

## Source and Destination Environment Coexistence during Migration\*

- Offer organizations the option to support both source and destination environments as collaboration options during the transition phase

## Online or Offline Migration\*

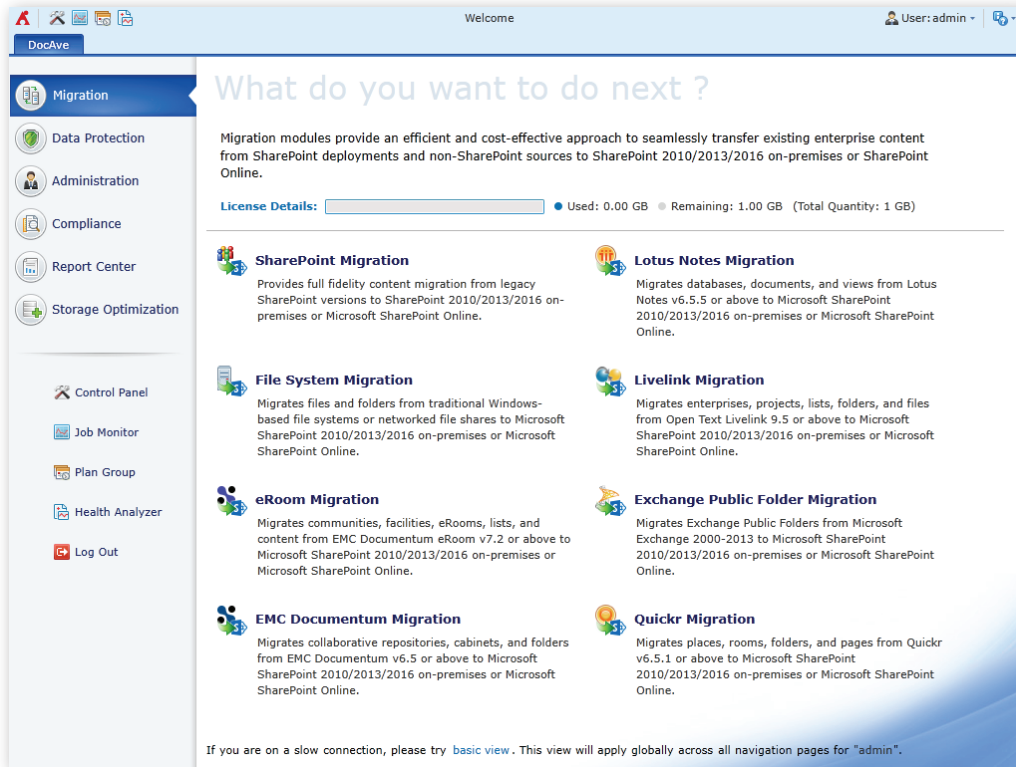

- Migrate online over existing networks, or offline to securely migrate data across firewalls

## Data Synchronization with Customized Scheduling

- Keep source and destination environments in sync with customizable scheduling to minimize business disruption during the course of the migration project

# Supported Source Systems

DocAve offers the following modules for migration to Microsoft SharePoint Server, and SharePoint Online:

Supported Migration Types on DocAve 6 Platform

## Documentum eRoom
